Chapter 1 Introduction

Thank you for purchasing ASRock 775i65G motherboard, a reliable motherboard produced under ASRock’s consistently stringent quality control. It delivers excellent performance with robust design conforming to ASRock’s commitment to quality and endurance.

In this manual, chapter 1 and 2 contain introduction of the motherboard and step-by-step guide to the hardware installation. Chapter 3 and 4 contain the configuration guide to BIOS setup and information of the Support CD.

Because the motherboard specifications and the BIOS software might be updated, the content of this manual will be subject to change without notice. In case any modifications of this manual occur, the updated version will be available on ASRock website without further notice. You may find the latest VGA cards and CPU support lists on ASRock website as well. ASRock website http://www.asrock.com

**WARNING**

Please realize that there is a certain risk involved with overclocking, including adjusting the setting in the BIOS, applying Untied Overclocking Technology, or using the third-party overclocking tools. Overclocking may affect your system stability, or even cause damage to the components and devices of your system. It should be done at your own risk and expense. We are not responsible for possible damage caused by overclocking.
CAUTION!

1. FSB1066-CPU is supported only when you install AGP VGA card into AGP slot. Besides, if you use a FSB1066-CPU on this motherboard, please adopt a DDR400 CL2.5 memory module.

2. About the setting of “Hyper Threading Technology”, please check page 25.

3. This motherboard supports Untied Overclocking Technology. Please read “Untied Overclocking Technology” on page 21 for details.

4. This motherboard supports Dual Channel Memory Technology. Before you implement Dual Channel Memory Technology, make sure to read the installation guide of memory modules on page 15 for proper installation.

5. Please check the table below for the memory support frequency and its corresponding CPU FSB frequency.

<table>
<thead>
<tr>
<th>CPU FSB Frequency</th>
<th>Memory Support Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>800</td>
<td>DDR266, DDR320*, DDR400</td>
</tr>
<tr>
<td>533</td>
<td>DDR266, DDR333</td>
</tr>
</tbody>
</table>

* When you use an FSB800-CPU on this motherboard, it will run at DDR320 if you adopt a DDR333 memory module.

6. Although this motherboard offers stepless control, it is not recommended to perform over-clocking. Frequencies other than the recommended CPU bus frequencies may cause the instability of the system or damage the CPU.

7. While CPU overheat is detected, the system will automatically shutdown. Before you resume the system, please check if the CPU fan on the motherboard functions properly and unplug the power cord, then plug it back again. To improve heat dissipation, remember to spray thermal grease between the CPU and the heatsink when you install the PC system.

8. Do NOT use a 3.3V AGP card on the AGP slot of this motherboard! It may cause permanent damage!

9. Power Management for USB 2.0 works fine under Microsoft® Windows® XP SP1 or SP2 / 2000 SP4. It may not work properly under Microsoft® Windows® 98® / ME.

Chapter 2 Installation

775i65G is a Micro ATX form factor (9.6” x 8.0”, 24.4 x 20.3 cm) motherboard. Before you install the motherboard, study the configuration of your chassis to ensure that the motherboard fits into it.

Make sure to unplug the power cord before installing or removing the motherboard. Failure to do so may cause physical injuries to you and damages to motherboard components.

2.1 Screw Holes
Place screws into the holes indicated by circles to secure the motherboard to the chassis.

Do not over-tighten the screws! Doing so may damage the motherboard.

2.2 Pre-installation Precautions
Take note of the following precautions before you install motherboard components or change any motherboard settings.

1. Unplug the power cord from the wall socket before touching any component.
2. To avoid damaging the motherboard components due to static electricity, NEVER place your motherboard directly on the carpet or the like. Also remember to use a grounded wrist strap or touch a safety grounded object before you handle components.
3. Hold components by the edges and do not touch the ICs.
4. Whenever you uninstall any component, place it on a grounded antistatic pad or in the bag that comes with the component.

Before you install or remove any component, ensure that the power is switched off or the power cord is detached from the power supply. Failure to do so may cause severe damage to the motherboard, peripherals, and/or components.
2.3 CPU Installation

For the installation of Intel 775-LAND CPU, please follow the steps below.

Before you insert the 775-LAND CPU into the socket, please check if the CPU surface is unclean or if there is any bent pin on the socket. Do not force to insert the CPU into the socket if above situation is found. Otherwise, the CPU will be seriously damaged.

Step 1. Open the socket:
Step 1-1. Disengaging the lever by depressing down and out on the hook to clear retention tab.
Step 1-2. Rotate the load lever to fully open position at approximately 135 degrees.
Step 1-3. Rotate the load plate to fully open position at approximately 100 degrees.

Step 2. Insert the 775-LAND CPU:
Step 2-1. Hold the CPU by the edges where are marked with black lines.
Step 2-2. Orient the CPU with IHS (Integrated Heat Sink) up. Locate Pin1 and the two orientation key notches.
For proper inserting, please ensure to match the two orientation key notches of the CPU with the two alignment keys of the socket.

Step 2-3. Carefully place the CPU into the socket by using a purely vertical motion.
Step 2-4. Verify that the CPU is within the socket and properly mated to the orient keys.

Step 3. Remove PnP Cap (Pick and Place Cap):
Use your left hand index finger and thumb to support the load plate edge, engage PnP cap with right hand thumb and peel the cap from the socket while pressing on center of PnP cap to assist in removal.

1. It is recommended to use the cap tab to handle and avoid kicking off the PnP cap.
2. This cap must be placed if returning the motherboard for after service.

Step 4. Close the socket:
Step 4-1. Rotate the load plate onto the IHS.
Step 4-2. While pressing down lightly on load plate, engage the load lever.
Step 4-3. Secure load lever with load plate tab under retention tab of load lever.
2.4 Installation of CPU Fan and Heatsink

This motherboard is equipped with 775-Pin socket that supports Intel 775-LAND CPU. Please adopt the type of heatsink and cooling fan compliant with Intel 775-LAND CPU to dissipate heat. Before you installed the heatsink, you need to spray thermal interface material between the CPU and the heatsink to improve heat dissipation. Ensure that the CPU and the heatsink are securely fastened and in good contact with each other. Then connect the CPU fan to the CPU_FAN connector (CPU_FAN1, see page 9, No. 6).

For proper installation, please kindly refer to the instruction manuals of your CPU fan and heatsink.

Below is an example to illustrate the installation of the heatsink for 775-LAND CPU.

Step 1. Apply thermal interface material onto center of IHS on the socket surface.

Step 2. Place the heatsink onto the socket. Ensure fan cables are oriented on side closest to the CPU fan connector on the motherboard (CPU_FAN1, see page 9, No. 6).

Step 3. Align fasteners with the motherboard throughholes.

Step 4. Rotate the fastener clockwise, then press down on fastener caps with thumb to install and lock. Repeat with remaining fasteners.

If you press down the fasteners without rotating them clockwise, the heatsink cannot be secured on the motherboard.

Step 5. Connect fan header with the CPU fan connector on the motherboard.

Step 6. Secure excess cable with tie-wrap to ensure cable does not interfere with fan operation or contact other components.
2.5 Installation of Memory Modules (DIMM)

This motherboard provides two 184-pin DDR (Double Data Rate) DIMM slots, and supports Dual Channel Memory Technology. For dual channel configuration, you always need to install two identical (the same brand, speed, size and chip-type) memory modules in the DDR DIMM slots to activate Dual Channel Memory Technology. Otherwise, it will operate at single channel mode.

If you install only one memory module or two non-identical memory modules, it is unable to activate the Dual Channel Memory Technology.

Installing a DIMM

Please make sure to disconnect power supply before adding or removing DIMMs or the system components.

Step 1. Unlock a DIMM slot by pressing the retaining clips outward.
Step 2. Align a DIMM on the slot such that the notch on the DIMM matches the break on the slot.

The DIMM only fits in one correct orientation. It will cause permanent damage to the motherboard and the DIMM if you force the DIMM into the slot at incorrect orientation.

Step 3. Firmly insert the DIMM into the slot until the retaining clips at both ends fully snap back in place and the DIMM is properly seated.
2.6 Expansion Slots (PCI, AGP and AMR Slots)

There are 3 PCI slots, 1 AGP slot, and 1 AMR slot on this motherboard.

**PCI slots:** The PCI slots are used to install expansion cards that have the 32-bit PCI interface.

**AGP slot:** The AGP slot is used to install a graphics card. The ASRock AGP slot has a special design of clasp that can securely fasten the inserted graphics card.

⚠️ Do NOT use a 3.3V AGP card on the AGP slot of this motherboard! It may cause permanent damage!

**AMR slot:** AMR slot is used to insert an ASRock MR card (optional) with v.92 Modem functionality.

**Installing an expansion card**

Step 1. Before installing the expansion card, please make sure that the power supply is switched off or the power cord is unplugged. Please read the documentation of the expansion card and make necessary hardware settings for the card before you start the installation.

Step 2. Remove the system unit cover (if your motherboard is already installed in a chassis).

Step 3. Remove the bracket facing the slot that you intend to use. Keep the screws for later use.

Step 4. Align the card connector with the slot and press firmly until the card is completely seated on the slot.

Step 5. Fasten the card to the chassis with screws.

Step 6. Replace the system cover.
2.7 Jumpers Setup

The illustration shows how jumpers are setup. When the jumper cap is placed on pins, the jumper is “Short”. If no jumper cap is placed on pins, the jumper is “Open”. The illustration shows a 3-pin jumper whose pin1 and pin2 are “Short” when jumper cap is placed on these 2 pins.

After waiting for 15 seconds, use a jumper cap to short 2 pins on CLR_CMOS0 for 5 seconds.
2.8 Onboard Headers and Connectors

Onboard headers and connectors are NOT jumpers. Do NOT place jumper caps over these headers and connectors. Placing jumper caps over the headers and connectors will cause permanent damage of the motherboard!

FDD connector
(33-pin FLOPPY1)
(see p.9 No. 19)

Note: Make sure the red-striped side of the cable is plugged into Pin1 side of the connector.

Primary IDE connector (Blue)
(39-pin IDE1, see p.9 No. 9)
connect the blue end to the motherboard

Secondary IDE connector (Black)
(39-pin IDE2, see p.9 No. 8)
connect the black end to the IDE devices

Note: If you use only one IDE device on this motherboard, please set the IDE device as "Master". Please refer to the instruction of your IDE device vendor for the details. Besides, to optimize compatibility and performance, please connect your hard disk drive to the primary IDE connector (IDE1, blue) and CD-ROM to the secondary IDE connector (IDE2, black).

Serial ATA Connectors
(SATA1: see p.9 No. 12)
(SATA2: see p.9 No. 11)

These two Serial ATA (SATA) connectors support SATA data cables for internal storage devices. The current SATA interface allows up to 1.5 Gb/s data transfer rate.

Serial ATA (SATA) Data Cable

Either end of the SATA data cable can be connected to the SATA hard disk or the SATA connector on the motherboard.
Serial ATA (SATA) Power Cable
(Optional)
Please connect the black end of SATA power cable to the power connector on each drive. Then connect the white end of SATA power cable to the power connector of the power supply.

USB 2.0 Header
(9-pin USB67)
(see p.9 No. 18)
ASRock I/O Plus™ accommodates 6 default USB 2.0 ports. If those USB 2.0 ports on the I/O panel are not sufficient, this USB 2.0 header is available to support 2 additional USB 2.0 ports.

Shared USB 2.0 Header
(9-pin USB4_5)
(see p.9 No. 29)
This USB4_5 connector is shared with the USB 2.0 ports 4,5 on ASRock I/O Plus™. When using the front panel USB ports by attaching the front panel USB cable to this connector (USB4_5), the USB ports 4,5 on ASRock I/O Plus™ will not be able to function.

Infrared Module Header
(5-pin IR1)
(see p.9 No. 16)
This header supports an optional wireless transmitting and receiving infrared module.

Internal Audio Connectors
(4-pin CD1, 4-pin AUX1)
(CD1: see p.9 No. 24)
(AUX1: see p.9 No. 25)
These connectors allow you to receive stereo audio input from sound sources such as a CD-ROM, DVD-ROM, TV tuner card, or MPEG card.

Front Panel AC’97 Audio Header
(8-pin AUDIO1)
(see p.9 No. 22)
This is an interface for front panel audio cable that allows convenient connection and control of audio devices.
1. +5VA is used for audio power only, please don’t connect it to any other power, such as USB.
2. HD (Azalia) audio front panel and AC’97 audio front panel have different pin-definition. Incorrect connection of the audio front panel and the front panel audio header may cause permanent damage to this motherboard.

**System Panel Header**
(9-pin PANEL1)
(see p.9 No. 14)

This header accommodates several system front panel functions.

**Chassis Speaker Header**
(4-pin SPEAKER 1)
(see p.9 No. 15)

Please connect the chassis speaker to this header.

**Chassis Fan Connector**
(3-pin CHA_FAN1)
(see p.9 No. 13)

Please connect a chassis fan cable to this connector and match the black wire to the ground pin.

**CPU Fan Connector**
(4-pin CPU_FAN1)
(see p.9 No. 6)

Please connect a CPU fan cable to this connector and match the black wire to the ground pin.

**ATX Power Connector**
(20-pin ATXPWR1)
(see p.9 No. 3)

Please connect an ATX power supply to this connector.

**ATX 12V Connector**
(4-pin ATX12V1)
(see p.9, No. 2)

Please note that it is necessary to connect a power supply with ATX 12V plug to this connector so that it can provide sufficient power. Failing to do so will cause the failure to power up.

**COM Port Header**
(9-pin COM1)
(see p.9 No. 20)

This COM port header is used to support a COM port module.
2.9 Serial ATA (SATA) Hard Disks Installation

This motherboard adopts Intel ICH5 south bridge chipset that supports Serial ATA (SATA) hard disks. You may install SATA hard disks on this motherboard for internal storage devices. This section will guide you to install the SATA hard disks.

STEP 1: Install the SATA hard disks into the drive bays of your chassis.
STEP 2: Connect the SATA power cable to the SATA hard disk.
STEP 3: Connect one end of the SATA data cable to the motherboard’s primary SATA connector (SATA1).
STEP 4: Connect the other end of the SATA data cable to the primary SATA hard disk. If you just want to install only one SATA HDD, the installation process is complete at this step. If you want to install two SATA HDDs, please continue to do the following steps.
STEP 5: Connect the SATA power cable to the SATA hard disk.
STEP 6: Connect one end of the second SATA data cable to the motherboard’s secondary SATA connector (SATA2).
STEP 7: Connect the other end of the SATA data cable to the secondary SATA hard disk.

Before you install OS into the SATA hard disk, you need to check and ensure the configuration of the OnBoard IDE Operate Mode option in BIOS setup is correct according to the condition of your system. For the configuration details, please refer to the instruction on page 29.

2.10 Untied Overclocking Technology

This motherboard supports Untied Overclocking Technology, which means during overclocking, FSB enjoys better margin due to fixed AGP / PCI bus. You may set “CPU Host Frequency” option of BIOS setup to [Auto], which will show you the actual CPU host frequency in the following item. Therefore, CPU FSB is untied during overclocking, but AGP / PCI bus is in the fixed mode so that FSB can operate under a more stable overclocking environment.

Please refer to the warning on page 7 for the possible overclocking risk before you apply Untied Overclocking Technology.
Chapter 3 BIOS SETUP UTILITY

3.1 Introduction

This section explains how to use the BIOS SETUP UTILITY to configure your system. The BIOS FWH chip on the motherboard stores the BIOS SETUP UTILITY. You may run the BIOS SETUP UTILITY when you start up the computer. Please press <F2> during the Power-On-Self-Test (POST) to enter the BIOS SETUP UTILITY, otherwise, POST will continue with its test routines.

If you wish to enter the BIOS SETUP UTILITY after POST, restart the system by pressing <Ctrl> + <Alt> + <Delete>, or by pressing the reset button on the system chassis. You may also restart by turning the system off and then back on.

Because the BIOS software is constantly being updated, the following BIOS setup screens and descriptions are for reference purpose only, and they may not exactly match what you see on your screen.

3.1.1 BIOS Menu Bar

The top of the screen has a menu bar with the following selections:

- **Main** To set up the system time/date information
- **Advanced** To set up the advanced BIOS features
- **PCIPnP** To set up the PCI features
- **Boot** To set up the default system device to locate and load the Operating System
- **Security** To set up the security features
- **Chipset** To set up the chipset features
- **Exit** To exit the current screen or the BIOS SETUP UTILITY

Use ←→ key or ←→ key to choose among the selections on the menu bar, and then press <Enter> to get into the sub screen.
3.1.2 Navigation Keys

Please check the following table for the function description of each navigation key.

<table>
<thead>
<tr>
<th>Navigation Key(s)</th>
<th>Function Description</th>

</tbody>
</table>

3.2 Main Screen

When you enter the BIOS SETUP UTILITY, the Main screen will appear and display the system overview.

3.3 Advanced Screen

In this section, you may set the configurations for the following items: CPU Configuration, Chipset Configuration, ACPI Configuration, IDE Configuration, PCIPnP Configuration, Floppy Configuration, SuperIO Configuration, and USB Configuration.
Setting wrong values in this section may cause the system to malfunction.

3.3.1 CPU Configuration

CPU Host Frequency

While entering setup, BIOS auto detects the present CPU host frequency of this motherboard. The actual CPU host frequency will show in the following item.

Boot Failure Guard

Enable or disable the feature of Boot Failure Guard.

Spread Spectrum

This item should always be [Auto] for better system stability.

Ratio Status

This is a read-only item, which displays whether the ratio status of this motherboard is “Locked” or “Unlocked”. If it shows “Unlocked”, you will find an item Ratio CMOS Setting appears to allow you changing the ratio value of this motherboard. If it shows “Locked”, then the item Ratio CMOS Setting will be hidden. If you use the ratio value to time the CPU frequency, it will be equal to the core speed of the installed processor.
Ratio Actual Value
   This is a read-only item, which displays the ratio actual value of this motherboard.

Ratio CMOS Setting
   If the ratio status is unlocked, will find this item appear to allow you chang-
ing the ratio value of this motherboard.

Enhance Halt State
   All processors support the Halt State (C1). The C1 state is supported
   through the native processor instructions HLT and MWAIT and requires no
   hardware support from the chipset. In the C1 power state, the processor
   maintains the context of the system caches.

Max CPUID Value Limit
   For Prescott CPU only, some OSes (ex. NT4.0) cannot handle the function
   with disable. This should be enabled in order to boot legacy OSes that
   cannot support CPUs with extended CPUID functions.

Intel (R) Virtualization tech.
   When this option is set to [Enabled], a VMM (Virtual Machine Architecture)
   can utilize the additional hardware capabilities provided by Vanderpool
   Technology. This option will be hidden if the installed CPU does not support
   Intel (R) Virtualization Technology.

CPU Thermal Throttling
   You may select [Enabled] to enable P4 CPU internal thermal control mecha-
nism to keep the CPU from overheated.

No-Excute Memory Protection
   No-Execution (NX) Memory Protection Technology is an enhancement to the
   IA-32 Intel Architecture. An IA-32 processor with “No Execute (NX) Memory
   Protection” can prevent data pages from being used by malicious software
to execute code. This option will be hidden if the current CPU does not
support No-Excute Memory Protection.

Hyper Threading Technology
   To enable this feature, it requires a computer system with an Intel Pentium®4
   processor that supports Hyper-Threading technology and an operating sys-
tem that includes optimization for this technology, such as Microsoft® Win-
dows® XP. Set to [Enabled] if using Microsoft® Windows® XP, or Linux kernel
version 2.4.18 or higher. This option will be hidden if the installed CPU does
not support Hyper-Threading technology.

Intel (R) SpeedStep(tm) tech.
   Intel (R) SpeedStep(tm) tech. is Intel’s new power saving technology. Proces-
sor can switch between multiple frequency and voltage points to enable
power savings. If you select [Auto], you need to set the “Power Schemes”
as “Portable/Laptop” to enable this function.
3.3.2 Chipset Configuration

**DRAM Frequency**
If [Auto] is selected, the motherboard will detect the memory module(s) inserted and assigns appropriate frequency automatically. You may also select other value as operating frequency: [133MHz (DDR 266)], [166MHz (DDR 333)], [200MHz (DDR 400)].

**Flexibility Option**
The default value of this option is [Disabled]. It will allow better tolerance for memory compatibility when it is set to [Enabled].

**Configure DRAM Timing by SPD**
Select [Enabled] will configure the following items by the contents in the SPD (Serial Presence Detect) device.

- **DRAM CAS# Latency**
  Use this item to adjust the means of memory accessing. Configuration options: [Auto], [2.5], [2], and [3].

- **DRAM RAS# Precharge**
  This controls the idle clocks after a precharge command is issued. Configuration options: [4 Clocks], [3 Clocks], and [2 Clocks].

- **DRAM RAS# to CAS# Delay**
  This controls the latency between the DRAM active command and the read / write command. Configuration options: [4 Clocks], [3 Clocks], and [2 Clocks].

- **DRAM Precharge Delay**
  This controls the number of DRAM clocks for RAS minimum. Configuration options: [8 Clocks], [7 Clocks], [6 Clocks], and [5 Clocks].

- **DRAM Burst Length**
  DRAM Burst length can be set as [8] or [4].

- **Init. Graphic Adapter Priority**
  This allows you to select [PCI/AGP] and [AGP/PCI] as the initial graphics adapter priority. The default value is [PCI/AGP].
Graphics Aperture Size
It refers to a section of the PCI memory address range used for graphics memory. It is recommended to leave this field at the default value unless the installed AGP card’s specifications requires other sizes.

OnBoard LAN
This allows you to enable or disable the “OnBoard LAN” feature.

OnBoard AC’97 Audio
Select [Auto], [Enabled] or [Disabled] for the onboard AC’97 Audio feature.

OnBoard MC’97 Modem
Select [Auto] or [Disabled] for the onboard MC’97 Modem feature.

ICH Thermal Throttling
You may select [Auto] or [Disabled] to adjust ICH southbridge internal thermal control mechanism to keep ICH southbridge from overheated.

VCCM +2.7V Voltage
This option allows you to set VCCM +2.7V Voltage. The default value is [Auto]. Configuration options: [High], [Low], and [Auto].

VDDQ +1.58V Voltage
This option allows you to set VDDQ +1.58V Voltage. The default value is [Auto]. Configuration options: [High], [Low], and [Auto].
3.3.3 ACPI Configuration

This field allows you to select whether to auto-detect or disable the Suspend-to-RAM feature. Select [Auto] will enable this feature if the system supports it.

**Suspend to RAM**

Use this item to enable or disable Suspend-to-RAM feature.

**Ring-In Power On**

Use this item to enable or disable Ring-In signals to turn on the system from the power-off mode.

**PCI Devices Power On**

Use this item to enable or disable PCI devices to turn on the system from the power-off mode.

**PS/2 Keyboard Power On**

Use this item to enable or disable PS/2 keyboard to turn on the system from the power-off mode.

**RTC Alarm Power On**

Use this item to enable or disable RTC (Real Time Clock) to power on the system.
3.3.4 IDE Configuration

OnBoard IDE Operate Mode

Please select [Compatible Mode] when you install legacy OS (Windows ME / 98SE) into SATA device. If you install legacy OS into IDE HDD while SATA devices are used, you also need to select [Compatible Mode].

If native OS (Windows 2000 / XP) is installed into SATA device, please select [Enhanced Mode]. You also need to select [Enhanced Mode] while native OS is installed into IDE HDD and SATA devices are used.

If you do not install any SATA device, please also select [Enhanced Mode] no matter you use legacy OS or native OS for the system.

Please note that the following options will be varied depending on the "OnBoard IDE Operate Mode" ([Compatible Mode] or [Enhanced Mode]) that you selected.

When [Enhanced Mode] is selected:

**OnBoard IDE Controller**

You may enable either the primary IDE channel or the secondary IDE channel. Or you may enable both the primary and the secondary IDE channels by selecting [Both]. Set to [Disabled] will disable the both. Configuration options: [Disabled], [Primary], [Secondary], [Both].

When [Compatible Mode] is selected

**Combined Mode Option**

It allows you to select between [Pri IDE + SATA] and [SATA + Sec IDE]. If it is set to [Pri IDE + SATA], then the secondary IDE will not work. Likewise, if it is set to [SATA + Sec IDE], then the primary IDE will not work.

Because Intel® ICH5 south bridge only supports four IDE devices under legacy OS (Windows ME / 98SE), you have to choose either [Pri IDE + SATA] or [SATA + Sec IDE] when the installed SATA device is used with legacy OS.
IDE Device Configuration

You may set the IDE configuration for the device that you specify. We will use the “Primary IDE Master” as the example in the following instruction, which can be applied to the configurations of “Primary IDE Slave”, “Secondary IDE Master”, “Secondary IDE Slave”, “SATA1” and “SATA2” as well.

**TYPE**

Use this item to configure the type of the IDE device that you specify. Configuration options: [Not Installed], [Auto], [CD/DVD], and [ARMD].

**[Not Installed]**: Select [Not Installed] to disable the use of IDE device.

**[Auto]**: Select [Auto] to automatically detect the hard disk drive. After selecting the hard disk information into BIOS, use a disk utility, such as FDISK, to partition and format the new IDE hard disk drives. This is necessary so that you can write or read data from the hard disk. Make sure to set the partition of the Primary IDE hard disk drives to active.

**[CD/DVD]**: This is used for IDE CD/DVD drives.

**[ARMD]**: This is used for IDE ARMD (ATAPI Removable Media Device), such as MO.

**LBA/Large Mode**

Use this item to select the LBA/Large mode for a hard disk > 512 MB under DOS and Windows; for Netware and UNIX user, select [Disabled] to disable the LBA/Large mode.
Block (Multi-Sector Transfer)
- The default value of this item is [Auto]. If this feature is enabled, it will enhance hard disk performance by reading or writing more data during each transfer.

PIO Mode
- Use this item to set the PIO mode to enhance hard disk performance by optimizing the hard disk timing.

DMA Mode
- DMA capability allows the improved transfer-speed and data-integrity for compatible IDE devices.

S.M.A.R.T.
- Use this item to enable or disable the S.M.A.R.T. (Self-Monitoring, Analysis, and Reporting Technology) feature. Configuration options: [Disabled], [Auto], [Enabled].

32-Bit Data Transfer
- Use this item to enable 32-bit access to maximize the IDE hard disk data transfer rate.

3.3.5 PCIPnP Configuration

PCI Latency Timer
- The default value is 32. It is recommended to keep the default value unless the installed PCI expansion cards’ specifications require other settings.

PCI IDE BusMaster
- Use this item to enable or disable the PCI IDE BusMaster feature.
3.3.6 Floppy Configuration

In this section, you may configure the type of your floppy drive.

**Floppy Configuration**

<table>
<thead>
<tr>
<th>Floppy</th>
<th>Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>1.44 MB 3.5&quot;</td>
</tr>
</tbody>

<td>[ECP + EPP]</td>
</tr>
<tr>
<td>DMA Channel</td>
<td>[DMA3]</td>
</tr>
<tr>
<td>IRQ</td>
<td>[IRQ7]</td>
</tr>
</tbody>
</table>

Allow BIOS to Enable or Disable Floppy Controller.
**Parallel Port Address**

Use this item to set the address for the onboard parallel port or disable it. Configuration options: [Disabled], [378], and [278].

**Parallel Port Mode**

Use this item to set the operation mode of the parallel port. The default value is [ECP+EPP]. If this option is set to [ECP+EPP], it will show the EPP version in the following item, “EPP Version”. Configuration options: [Normal], [Bi-Directional], and [ECP+EPP].

**EPP Version**

Use this item to set the EPP version. Configuration options: [1.9] and [1.7].

**ECP Mode DMA Channel**

Use this item to set the ECP mode DMA channel. Configuration options: [DMA0], [DMA1], and [DMA3].

**Parallel Port IRQ**

Use this item to set the IRQ for the parallel port. Configuration options: [IRQ5] and [IRQ7].

### 3.3.8 USB Configuration

#### USB Controller

Use this item to enable or disable the use of USB controller.

#### USB 2.0 Support

Use this item to enable or disable the USB 2.0 support.

#### Legacy USB Support

Use this item to enable or disable the support to emulate legacy I/O devices such as mouse, keyboard,... etc. Or you may select [Auto] so that the system will start to auto-detect; if there is no USB device connected, “Auto” option will disable the legacy USB support.

3.4 Hardware Health Event Monitoring Screen

In this section, it allows you to monitor the status of the hardware on your system, including the parameters of the CPU temperature, motherboard temperature, CPU fan speed, chassis fan speed, and the critical voltage.

CPU Temperature

This item allows you to identify the temperature of CPU fan. If you set this option as [Disabled], the CPU fan will operate in full speed. If you set this option as [Enabled], you will find the items "Target CPU Temperature ( °C)" , "Tolerance ( °C)" , and "Minimum Fan Speed" appear to allow you adjusting them. The default value is [Disabled].

Target CPU Temperature ( °C)

The target temperature will be between 45 °C and 65 °C. The default value is [50].

Tolerance ( °C)

The default value of tolerance is [2], which means the error of the target CPU temperature will be within 2 °C.

Target Fan Speed

Use this option to set the target fan speed. You can freely adjust the target fan speed according to the target CPU temperature that you choose. The default value is [Fast]. Configuration options: [Fast], [Middle] and [Slow].
3.5 Boot Screen

In this section, it will display the available devices on your system for you to configure the boot settings and the boot priority.

### BIOS SETUP UTILITY

<table>
<thead>
<tr>
<th>Boot Settings Configuration</th>
<th>Boot From Network [Disabled]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Boot Up Num-Lock [On]</td>
<td></td>
</tr>
</tbody>
</table>

- **Boot From Network**
  - Use this item to enable or disable the Boot From Network feature.

- **Boot Up Num-Lock**
  - If this item is set to [On], it will automatically activate the Numeric Lock function after boot-up.
3.5.2 Boot Device Priority
In this section, you may specify the boot sequence from the available devices in your system.

Likewise, you may also specify the boot sequence from the available devices for the hard disk drives, the removable drives, and the CD/DVD drives.

3.6 Security Screen
In this section, you may set or change the supervisor/user password for the system. For the user password, you may also clear it.
3.7 Exit Screen

Save Changes and Exit
When you select this option, it will pop-out the following message, “Save configuration changes and exit setup?” Select [OK] to save the changes and exit the BIOS SETUP UTILITY.

Discard Changes and Exit
When you select this option, it will pop-out the following message, “Discard changes and exit setup?” Select [OK] to exit the BIOS SETUP UTILITY without saving any changes.

Discard Changes
When you select this option, it will pop-out the following message, “Discard changes?” Select [OK] to discard all changes.

Load Optimal Defaults
When you select this option, it will pop-out the following message, “Load optimal defaults?” Select [OK] to load the default values for all the setup configurations.
Chapter 4 Software Support

4.1 Install Operating System
This motherboard supports various Microsoft® Windows® operating systems: 98SE/ME/2000/XP. Because motherboard settings and hardware options vary, use the setup procedures in this chapter for general reference only. Refer to your OS documentation for more information.

4.2 Support CD Information
The Support CD that came with the motherboard contains necessary drivers and useful utilities that enhance the motherboard features.

4.2.1 Running The Support CD
To begin using the support CD, insert the CD into your CD-ROM drive. The CD automatically displays the Main Menu if "AUTORUN" is enabled in your computer. If the Main Menu did not appear automatically, locate and double click on the file "ASSETUP.EXE" from the BIN folder in the Support CD to display the menus.

4.2.2 Drivers Menu
The Drivers Menu shows the available devices drivers if the system detects installed devices. Please install the necessary drivers to activate the devices.

4.2.3 Utilities Menu
The Utilities Menu shows the applications software that the motherboard supports. Click on a specific item then follow the installation wizard to install it.

4.2.4 "LGA 775 CPU Installation Live Demo" Program
This motherboard is equipped with Intel LGA 775 socket, which is a new CPU socket interface that Intel has released. Since it has several tiny pins, which are easily to be damaged by improper handling, ASRock sincerely presents you a clear installation guide through this "LGA 775 CPU Installation Live Demo". We hope you may check this live demo program before you start the installation of LGA 775 CPU in order to reduce the risks of CPU and motherboard damages caused by any improper handling. To see this Live Demo, you can run Microsoft® Media Player® to play the file. You may find this Live Demo in the motherboard's Support CD through the following path: ..\MPEGAV\LGA775INST.DAT

4.2.5 Contact Information
If you need to contact ASRock or want to know more about ASRock, welcome to visit ASRock’s website at http://www.asrock.com; or you may contact your dealer for further information.
