Who knew that at age 19, I would be a World Champion PC gamer. When I was 13, I actually played competitive billiards in professional tournaments and won four or five games off guys who played at the highest level. I actually thought of making a career of it, but at that young age situations change rapidly. Because I’ve been blessed with great hand-eye coordination and a grasp of mathematics (an important element in video gaming) I gravitated to that activity.

GOING PRO
I started professional gaming in 1999 when I entered the CPL (Cyberathlete Professional League) tournament in Dallas and won $4,000 for coming in third place. Emerging as one of the top players in the United States, a company interested in sponsoring me flew me to Sweden to compete against the top 12 players in the world. I won 18 straight games, lost none, and took first place, becoming the number one ranked Quake III player in the world in the process. Two months later I followed that success by traveling to Dallas and defending my title as the world’s best Quake III player, winning the $40,000 grand prize. From there I entered competitions all over the world, including Singapore, Korea, Germany, Australia, Holland and Brazil in addition to Los Angeles, New York and St. Louis.

WINNING STREAK
I was excited to showcase my true gaming skills when defending my title as CPL Champion of the year at the CPL Winter 2001 because I would be competing in a totally different first person shooter (fps) game, Alien vs. Predator II. I won that competition and walked away with a new car. The next year I won the same title playing Unreal Tournament 2003, becoming the only three-time CPL champion of the year. And I did it playing a different game each year, something no one else has ever done and a feat of which I am extremely proud.

At QuakeCon 2002, I faced off against my rival ZeRo4 in one of the most highly anticipated matches of the year, winning in a 14 to (-1) killer victory. Competing at Quakecon 2004, I became the World’s 1st Doom3 Champion by defeating Daler in a series of very challenging matches and earning $25,000 for the victory.

Since then Fatal1ty has traveled the globe to compete against the best in the world, winning prizes and acclaim, including the 2005 CPL World Tour Championship in New York City for a $150,000 first place triumph. In August 2007, Johnathan was awarded the first ever Lifetime Achievement Award in the four year history of the eSports-Award for “showing exceptional sportsmanship, taking part in shaping eSports into what it is today and for being the prime representative of this young sport. He has become the figurehead for eSports worldwide”.

Fatal1ty Story
LIVIN’ LARGE
Since my first big tournament wins, I have been a “Professional Cyberathlete”, traveling the world and livin’ large with lots of International media coverage on outlets such as MTV, ESPN and a 60 Minutes segment on CBS to name only a few. It’s unreal - it’s crazy. I’m living a dream by playing video games for a living. I’ve always been athletic and took sports like hockey and football very seriously, working out and training hard. This discipline helps me become a better gamer and my drive to be the best has opened the doors necessary to become a professional.

A DREAM
Now, another dream is being realized – building the ultimate gaming computer, made up of the best parts under my own brand. Quality hardware makes a huge difference in competitions…a couple more frames per second and everything gets really nice. It’s all about getting the computer processing faster and allowing more fluid movement around the maps.

My vision for Fatal1ty hardware is to allow gamers to focus on the game without worrying about their equipment, something I’ve preached since I began competing. I don’t want to worry about my equipment. I want to be there – over and done with - so I can focus on the game. I want it to be the fastest and most stable computer equipment on the face of the planet, so quality is what Fatal1ty Brand products represent.

Chapter 1 Introduction

Thank you for purchasing ASRock Fatal1ty Z87 Professional Series motherboard, a reliable motherboard produced under ASRock’s consistently stringent quality control. It delivers excellent performance with robust design conforming to ASRock’s commitment to quality and endurance.

In this manual, Chapter 1 and 2 contains the introduction of the motherboard and step-by-step installation guides. Chapter 3 contains the operation guide of the software and utilities. Chapter 4 contains the configuration guide of the BIOS setup.

1.1 Package Contents

- ASRock Fatal1ty Z87 Professional Series Motherboard (ATX Form Factor)
- ASRock Fatal1ty Z87 Professional Series Quick Installation Guide
- ASRock Fatal1ty Z87 Professional Series Support CD
- 8 x Serial ATA (SATA) Data Cables (Optional)
- 2 x Serial ATA (SATA) 1 to 1 Power Cables (Optional)
- 1 x I/O Panel Shield
- 1 x ASRock SLI_Bridge_2S Card
- 1 x Front USB 3.0 Panel with 2.5” HDD/SSD Rack
- 4 x HDD Screws
- 6 x Chassis Screws
- 1 x Rear USB 3.0 Bracket
## 1.2 Specifications

### Platform
- ATX Form Factor
- Premium Gold Capacitor design (100% Japan-made high-quality Conductive Polymer Capacitors)

### A-Style
- Home Cloud
- HDMI-In

### Gaming Armor
- **CPU Power**
  - Hi-Density Power Connector
  - Dual-Stack MOSFET (DSM)
  - Multiple Filter Cap (MFC) (Filter different noise by 3 different capacitors: DIP solid cap, POSCAP and MLCC)

### VGA Card
- 15μGold Finger in VGA PCIe Slot (PCIE2)

### Internet
- Intel® LAN

### Cooling
- 2oz copper PCB
- Heat Pipe Design

### CPU
- Supports 4th Generation Intel® Core™ i7 / i5 / i3 / Xeon® / Pentium® / Celeron® in LGA1150 Package
- Digi Power Design
- 12 Power Phase Design
- Supports Intel® Turbo Boost 2.0 Technology
- Supports Intel® K-Series unlocked CPU
- Supports ASRock BCLK Full-range Overclocking

### Chipset
- Intel® Z87

### Memory
- Dual Channel DDR3 Memory Technology
- 4 x DDR3 DIMM slots
- Supports DDR3 2933+(OC)/2800(OC)/2400(OC)/2133(OC)/1866(OC)/1600/1333/1066 non-ECC, un-buffered memory
- Max. capacity of system memory: 32GB (see CAUTION)
- Supports Intel® Extreme Memory Profile (XMP)1.3/1.2
- Distortion-Free Slot
Expansion Slot

- 3 x PCI Express 3.0 x16 slots (PCIE2/PCIE3/PCIE4: single at x16 (PCIE2); dual at x8 (PCIE2) / x8 (PCIE3); triple at x8 (PCIE2) / x4 (PCIE3) / x4 (PCIE4))
- 1 x PCI Express 2.0 x1 slot
- 1 x mini-PCI Express slot
- 2 x PCI slots
- Supports AMD Quad CrossFireX™, 3-Way CrossFireX™ and CrossFireX™
- Supports NVIDIA® Quad SLI™ and SLI™

Graphics

- Intel® HD Graphics Built-in Visuals and the VGA outputs can be supported only with processors which are GPU integrated.
- Supports Intel® HD Graphics Built-in Visuals: Intel® Quick Sync Video with AVC, MVC (S3D) and MPEG-2 Full HW Encode1, Intel® InTru™ 3D, Intel® Clear Video HD Technology, Intel® Insider™, Intel® HD Graphics 4600
- Pixel Shader 5.0, DirectX 11.1
- Max. shared memory 1792MB
- Dual VGA Output: support HDMI and DisplayPort ports by independent display controllers
- Supports HDMI Technology with max. resolution up to 4K × 2K (4096x2304) @ 24Hz
- Supports DisplayPort with max. resolution up to 4K × 2K (4096x2304) @ 24Hz
- Supports Auto Lip Sync, Deep Color (12bpc), xvYCC and HBR (High Bit Rate Audio) with HDMI (Compliant HDMI monitor is required)
- Supports HDCP function with HDMI and DisplayPort ports
- Supports Full HD 1080p Blu-ray (BD) playback with HDMI and DisplayPort ports

Audio

- 7.1 CH HD Audio
- Creative Sound Core3D quad-core sound and voice processor
- Supports SBX Pro Studio
- Supports CrystalVoice
- Supports Scout Mode
- Supports EAX1.0 to EAX5.0
- Premium Headset Amplifier (PHA)
LAN
- Gigabit LAN 10/100/1000 Mb/s
- 1 x Giga PHY Intel® I217V, 1 x GigaLAN Intel® I211AT
- Supports Intel® Remote Wake Technology (on Intel® I217V)
- Supports Wake-On-LAN
- Supports Dual LAN with Teaming
- Supports Energy Efficient Ethernet 802.3az
- Supports PXE

Rear Panel
I/O
- 1 x PS/2 Keyboard Port
- 1 x HDMI-Out Port
- 1 x HDMI-In Port
- 1 x DisplayPort
- 1 x Optical SPDIF Out Port
- 1 x eSATA Connector
- 3 x USB 2.0 Ports
- 1 x Fatal1ty Mouse Port (USB 2.0)
- 4 x USB 3.0 Ports (ASMedia Hub)
- 2 x RJ-45 LAN Ports with LED (ACT/LINK LED and SPEED LED)
- 1 x Clear CMOS Switch
- HD Audio Jack: Rear Speaker / Central / Bass / Line in / Front Speaker / Microphone

Storage
- 6 x SATA3 6.0 Gb/s connectors by Intel® Z87, support RAID (RAID 0, RAID 1, RAID 5, RAID 10, Intel Rapid Storage Technology 12 and Intel Smart Response Technology), NCQ, AHCI and “Hot Plug”
- 4 x SATA3 6.0 Gb/s connectors by ASMedia ASM1061, support NCQ, AHCI and “Hot Plug” functions (SATA3_A4 connector is shared with the eSATA port)
- 1 x eSATA connector by ASMedia ASM1061, supports NCQ, AHCI, “Hot Plug” and Port Multiplier functions

Connector
- 1 x IR header
- 1 x COM port header
- 1 x Power LED header
- 2 x CPU Fan connectors (1 x 4-pin, 1 x 3-pin)
- 3 x Chassis Fan connectors (1 x 4-pin, 2 x 3-pin)
- 1 x Power Fan connector (3-pin)
1 x 24 pin ATX power connector  
1 x 8 pin 12V power connector  
1 x SLI/XFire power connector  
1 x Front panel audio connector  
1 x SPDIF Out connector  
2 x USB 2.0 headers (support 4 USB 2.0 ports)  
2 x USB 3.0 headers (support 4 USB 3.0 ports)  
1 x Dr. Debug with LED  
1 x Power Switch with LED  
1 x Reset Switch with LED

### BIOS Feature
- 2 x 64Mb AMI UEFI Legal BIOS with Multilingual GUI support (1 x Main BIOS and 1 x Backup BIOS)  
- Supports Secure Backup UEFI Technology  
- ACPI 1.1 Compliance Wake Up Events  
- SMBIOS 2.3.1 Support  
- CPU, DRAM, PCH 1.05V, PCH 1.5V Voltage Multi-adjustment

### Support CD
- Drivers, Utilities, AntiVirus Software (Trial Version), CyberLink MediaEspresso 6.5 Trial, Google Chrome Browser and Toolbar, Start8, MeshCentral, Splashtop Streamer, XSplit

### Hardware Monitor
- CPU/Chassis Temperature Sensing  
- CPU/Chassis/Power Fan Tachometer  
- CPU/Chassis Quiet Fan (Allow Chassis Fan Speed Auto-Adjust by CPU Temperature)  
- CPU/Chassis Fan Multi-Speed Control  
- Voltage Monitoring: +12V, +5V, +3.3V, CPU Vcore

### OS
- Microsoft® Windows® 8 / 8 64-bit / 7 / 7 64-bit compliant

### Certifications
- FCC, CE, WHQL  
- ErP/EuP Ready (ErP/EuP ready power supply is required)

*For detailed product information, please visit our website: [http://www.asrock.com]*
Please realize that there is a certain risk involved with overclocking, including adjusting the setting in the BIOS, applying Untied Overclocking Technology, or using third-party overclocking tools. Overclocking may affect your system’s stability, or even cause damage to the components and devices of your system. It should be done at your own risk and expense. We are not responsible for possible damage caused by overclocking.

Due to limitation, the actual memory size may be less than 4GB for the reservation for system usage under Windows® 32-bit operating systems. Windows® 64-bit operating systems do not have such limitations. You can use ASRock XFast RAM to utilize the memory that Windows® cannot use.
1.3 Unique Features

ASRock F-Stream
F-Stream is ASRock’s multi purpose software suite with a new interface, more new features and improved utilities, including XFast RAM, Dehumidifier, Good Night LED, FAN-Tastic Tuning, OC Tweaker and a whole lot more.

ASRock Instant Flash
ASRock Instant Flash is a BIOS flash utility embedded in Flash ROM. This convenient BIOS update tool allows you to update the system BIOS in a few clicks without preparing an additional floppy diskette or other complicated flash utility. Just save the new BIOS file to your USB storage and launch this tool by pressing <F6> or <F2> during POST to enter the BIOS setup menu to access ASRock Instant Flash. Please be noted that the USB flash drive or hard drive must use FAT32/16/12 file system.

ASRock APP Charger
Simply by installing the ASRock APP Charger makes your iPhone/iPad/iPod Touch charge up to 40% faster than before on your computer. ASRock APP Charger allows you to quickly charge many Apple devices simultaneously and even supports continuous charging when your PC enters into Standby mode (S1), Suspend to RAM (S3), hibernation mode (S4) or power off (S5).

ASRock XFast USB
ASRock XFast USB can boost the performance of your USB storage devices. The performance may depend on the properties of the device.

ASRock XFast LAN
ASRock XFast LAN provides faster internet access, which includes the benefits listed below. LAN Application Prioritization: You can configure your application’s priority ideally and add new programs to the list. Lower Latency in Game: After setting online game’s priority higher, it can lower the latency in games. Traffic Shaping: You can watch Youtube HD videos and download simultaneously. Real-Time Analysis of Your Data: With the status window, you can easily recognize which data streams you are currently transferring.
**ASRock XFast RAM**

ASRock XFast RAM is included in F-Stream. It fully utilizes the memory space that cannot be used under Windows® 32-bit operating systems. ASRock XFast RAM shortens the loading time of previously visited websites, making web surfing faster than ever. And it also boosts the speed of Adobe Photoshop 5 times faster. Another advantage of ASRock XFast RAM is that it reduces the frequency of accessing your SSDs or HDDs in order to extend their lifespan.

**ASRock Crashless BIOS**

ASRock Crashless BIOS allows users to update their BIOS without fear of failing. If power loss occurs during the BIOS updating process, ASRock Crashless BIOS will automatically finish the BIOS update procedure after regaining power. Please note that BIOS files need to be placed in the root directory of your USB disk. Only USB 2.0 ports support this feature.

**ASRock OMG (Online Management Guard)**

Administrators are able to establish an internet curfew or restrict internet access at specified times via OMG. You may schedule the starting and ending hours of internet access granted to other users. In order to prevent users from bypassing OMG, guest accounts without permission to modify the system time are required.

**ASRock Internet Flash**

ASRock Internet Flash downloads and updates the latest UEFI firmware version from our servers for you without entering Windows® OS. Please setup network configuration before using Internet Flash.

**ASRock UEFI System Browser**

ASRock System Browser shows the overview of your current PC and the devices connected.

**ASRock Dehumidifier Function**

Users may prevent motherboard damages due to dampness by enabling “Dehumidifier Function”. When enabling Dehumidifier Function, the computer will power on automatically to dehumidify the system after entering S4/S5 state.

**ASRock Easy RAID Installer**

ASRock Easy RAID Installer can help you to copy the RAID driver from the support CD to your USB storage device. After copying the RAID driver to your USB storage device, please change “SATA Mode” to “RAID”, then you can start installing the OS in RAID mode.
ASRock Interactive UEFI

ASRock Interactive UEFI is a blend of system configuration tools, cool sound effects and stunning visuals. The unprecedented UEFI provides a more attractive interface and more amusement.

ASRock Fast Boot

With ASRock’s exclusive Fast Boot technology, it takes less than 1.5 seconds to logon to Windows 8 from a cold boot. No more waiting! The speedy boot will completely change your user experience and behavior.

ASRock Restart to UEFI

Windows® 8 brings the ultimate boot up experience. The lightning boot up speed makes it hard to access the UEFI setup. ASRock Restart to UEFI allows users to enter the UEFI automatically when turning on the PC. By enabling this function, the PC will enter the UEFI directly after you restart.

ASRock Good Night LED

ASRock Good Night LED technology offers you a better sleeping environment by extinguishing the unessential LEDs. By enabling Good Night LED in the BIOS, the Power/HDD LEDs will be switched off when the system is powered on. Good Night LED will automatically switch off the Power and Keyboard LEDs when the system enters into Standby/Hibernation mode as well.

ASRock USB Key

In a world where time is money, why waste precious time everyday typing usernames to log in to Windows? Why should we even bother memorizing those foot long passwords? Just plug in the USB Key and let your computer log in to windows automatically!

ASRock Key Master

What good is a weapon if you are unable to wield it proficiently? Key Master enhances your mouse and keyboard with customizable macros, sniper modes, scroll speed, key repeat rates and repeat delay, turning your boring old keyboard and mouse into lethal weapons.

ASRock Home Cloud

This motherboard supports remote wake with the onboard Intel LAN, so you can connect with your PC from anywhere in the world. You will be able to power your PC on or turn it off, monitor and take control of it remotely with another smartphone, tablet or computer.
ASRock FAN-Tastic Tuning

ASRock FAN-Tastic Tuning is included in F-Stream. Configure up to five different fan speeds using the graph. The fans will automatically shift to the next speed level when the assigned temperature is met.

ASRock Easy Driver Installer

For users that don’t have an optical disk drive to install the drivers from our support CD, Easy Driver Installer is a handy tool in the UEFI that installs the LAN driver to your system via an USB storage device, then downloads and installs the other required drivers automatically.

*Note: *ASMedia Hub* means that the respective port is connected to an ASMedia hub or controller.*

**Notes:**
- **USB 2.0 Ports (USB01)**: Two USB 2.0 ports are installed on the I/O panel for USB connectivity.
- **Display Port**: An HDMI port for connecting a display device.
- **Fatal1ty Mouse Port (USB2)**: A dedicated mouse port for improved performance.
- **Central / Bass (Orange)**: A jack for connecting central and bass speakers.
- **Rear Speaker (Black)**: A jack for connecting rear speakers.
- **Line In (Light Blue)**: A jack for connecting line input devices.
- **Front Speaker (Lime)**: A jack for connecting front speakers.
- **Microphone (Pink)**: A jack for connecting a microphone.

**Additional Features:**
- **Optical SPDIF Out Port**: Provides digital audio output.
- **USB 3.0 Ports (USB3_23)** and **USB 3.0 Ports (USB3_01)**: Two USB 3.0 ports for faster data transfer.
- **eSATA Connector***: An eSATA port for external storage devices.
- **HDMI-In Port** and **HDMI-Out Port**: HDMI ports for high-definition audio-video connectivity.
- **Clear CMOS Switch**: A switch for clearing CMOS settings.
- **PS/2 Keyboard Port**: A port for connecting a PS/2 keyboard.
* There are two LEDs on each LAN port. Please refer to the table below for the LAN port LED indications.

*** The eSATA connector supports SATA3 with cables within 1 meters.
Chapter 2 Installation

This is an ATX form factor motherboard. Before you install the motherboard, study the configuration of your chassis to ensure that the motherboard fits into it.

Pre-installation Precautions

Take note of the following precautions before you install motherboard components or change any motherboard settings.

• Make sure to unplug the power cord before installing or removing the motherboard. Failure to do so may cause physical injuries to you and damages to motherboard components.
• In order to avoid damage from static electricity to the motherboard’s components, NEVER place your motherboard directly on a carpet. Also remember to use a grounded wrist strap or touch a safety grounded object before you handle the components.
• Hold components by the edges and do not touch the ICs.
• Whenever you uninstall any components, place them on a grounded anti-static pad or in the bag that comes with the components.
• When placing screws to secure the motherboard to the chassis, please do not overtighten the screws! Doing so may damage the motherboard.
2.1 Installing the CPU

1. Before you insert the 1150-Pin CPU into the socket, please check if the PnP cap is on the socket, if the CPU surface is unclean, or if there are any bent pins in the socket. Do not force to insert the CPU into the socket if above situation is found. Otherwise, the CPU will be seriously damaged.

2. Unplug all power cables before installing the CPU.
Please save and replace the cover if the processor is removed. The cover must be placed if you wish to return the motherboard for after service.
2.2 Installing the CPU Fan and Heatsink

1. Apply thermal paste to the CPU.
2. Attach the heatsink to the CPU socket.
2.3 Installing Memory Modules (DIMM)

This motherboard provides four 240-pin DDR3 (Double Data Rate 3) DIMM slots, and supports Dual Channel Memory Technology.

</tbody>
</table>

1. For dual channel configuration, you always need to install identical (the same brand, speed, size and chip-type) DDR3 DIMM pairs.
2. It is unable to activate Dual Channel Memory Technology with only one or three memory module installed.
3. It is not allowed to install a DDR or DDR2 memory module into a DDR3 slot; otherwise, this motherboard and DIMM may be damaged.

The DIMM only fits in one correct orientation. It will cause permanent damage to the motherboard and the DIMM if you force the DIMM into the slot at incorrect orientation.
2.4 Expansion Slots (PCI and PCI Express Slots)

There are 2 PCI slots and 5 PCI Express slots on the motherboard.

PCI slot:
The PCI1 and PCI2 slots are used to install expansion cards that have 32-bit PCI interface.

PCIe slots:
PCIE1 (PCIe 2.0 x1 slots) is used for PCI Express x1 lane width cards.
PCIE2 (PCIe 3.0 x16 slot) is used for PCI Express x16 lane width graphics cards.
PCIE3 (PCIe 3.0 x16 slot) is used for PCI Express x8 lane width graphics cards.
PCIE4 (PCIe 3.0 x16 slot) is used for PCI Express x4 lane width graphics cards.
MINI_PCIE1 (mini-PCIe slot) is used for WiFi module.

Before installing an expansion card, please make sure that the power supply is switched off or the power cord is unplugged. Please read the documentation of the expansion card and make necessary hardware settings for the card before you start the installation.

For a better thermal environment, please connect a chassis fan to the motherboard’s chassis fan connector (CHA_FAN1, CHA_FAN2 or CHA_FAN3) when using multiple graphics cards.
2.5 Jumpers Setup

The illustration shows how jumpers are setup. When the jumper cap is placed on the pins, the jumper is “Short”. If no jumper cap is placed on the pins, the jumper is “Open”. The illustration shows a 3-pin jumper whose pin1 and pin2 are “Short” when a jumper cap is placed on these 2 pins.

Clear CMOS Jumper (CLRCMOS1) (see p.11, No. 21)

CLRCMOS1 allows you to clear the data in CMOS. To clear and reset the system parameters to default setup, please turn off the computer and unplug the power cord from the power supply. After waiting for 15 seconds, use a jumper cap to short pin2 and pin3 on CLRCMOS1 for 5 seconds. However, please do not clear the CMOS right after you update the BIOS. If you need to clear the CMOS when you just finish updating the BIOS, you must boot up the system first, and then shut it down before you do the clear-CMOS action. Please be noted that the password, date, time, and user default profile will be cleared only if the CMOS battery is removed.

The Clear CMOS Switch has the same function as the Clear CMOS jumper.
This motherboard has two BIOS onboard, a main BIOS (BIOS_A) and a backup BIOS (BIOS_B), which enhances protection for the safety and stability of your system. Normally, the system works on the main BIOS. However, if the main BIOS is corrupted or damaged, please use a jumper cap to short pin2 and pin3, then the backup BIOS will take over on the next system boot. After that, short pin1 and pin2 again, then use “Secure Backup UEFI” in BIOS setup utility to copy the BIOS file to the main BIOS to ensure normal system operation. For the sake of system safety, users cannot update the backup BIOS manually. Users may refer to the BIOS LED (BIOS_A_LED or BIOS_B_LED) to identify which BIOS is activated currently.
2.6 Onboard Headers and Connectors

Onboard headers and connectors are NOT jumpers. Do NOT place jumper caps over these headers and connectors. Placing jumper caps over the headers and connectors will cause permanent damage to the motherboard.

System Panel Header
(9-pin PANEL1)
(see p.11, No. 17)

Connect the power switch, reset switch and system status indicator on the chassis to this header according to the pin assignments below. Note the positive and negative pins before connecting the cables.

PWRBTN (Power Switch):
Connect to the power switch on the chassis front panel. You may configure the way to turn off your system using the power switch.

RESET (Reset Switch):
Connect to the reset switch on the chassis front panel. Press the reset switch to restart the computer if the computer freezes and fails to perform a normal restart.

PLED (System Power LED):
Connect to the power status indicator on the chassis front panel. The LED is on when the system is operating. The LED keeps blinking when the system is in S1/S3 sleep state. The LED is off when the system is in S4 sleep state or powered off (S5).

HDLED (Hard Drive Activity LED):
Connect to the hard drive activity LED on the chassis front panel. The LED is on when the hard drive is reading or writing data.

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.
Power LED Header
(3-pin PLED1)
(see p.11, No. 18)

Please connect the chassis power LED to this header to indicate the system’s power status.

Serial ATA3 Connectors
(SATA3_0_1:
see p.11, No. 11)
(SATA3_2_3:
see p.11, No. 12)
(SATA3_4_5:
see p.11, No. 13)
(SATA3_A1_A2:
see p.11, No. 10)
(SATA3_A3_A4:
see p.11, No. 9)

These ten SATA3 connectors support SATA data cables for internal storage devices with up to 6.0 Gb/s data transfer rate. If the eSATA port on the rear I/O has been connected, the internal SATA3_A4 will not function.
To minimize the boot time, use Intel® Z87 SATA ports (SATA3_0) for your bootable devices.

USB 2.0 Headers
(9-pin USB4_5)
(see p.11, No. 22)
(9-pin USB6_7)
(see p.11, No. 23)

Besides four USB 2.0 ports on the I/O panel, there are two headers on this motherboard. Each USB 2.0 header can support two ports.
USB 3.0 Headers
(19-pin USB3_4_5)
(see p.11, No. 8)

Besides four USB 3.0 ports on the I/O panel, there are two headers on this motherboard. Each USB 3.0 header can support two ports.

(19-pin USB3_6_7)
(see p.11, No. 24)

Front Panel Audio Header
(9-pin HD_AUDIO1)
(see p.11, No. 29)

This header is for connecting audio devices to the front audio panel.

---

1. High Definition Audio supports Jack Sensing, but the panel wire on the chassis must support HDA to function correctly. Please follow the instructions in our manual and chassis manual to install your system.

2. If you use an AC’97 audio panel, please install it to the front panel audio header by the steps below:
   A. Connect Mic_IN (MIC) to MIC2_L.
   B. Connect Audio_R (RIN) to OUT2_R and Audio_L (LIN) to OUT2_L.
   C. Connect Ground (GND) to Ground (GND).
   D. MIC_RET and OUT_RET are for the HD audio panel only. You don’t need to connect them for the AC’97 audio panel.
Chassis Speaker Header  
(4-pin SPEAKER1)  
(see p.11, No. 16)  
Please connect the chassis speaker to this header.

SPDIF Out Connector  
(2-pin SPDIF_OUT1)  
(see p.11, No. 28)  
Please connect the SPDIF_OUT connector of a HDMI VGA card to this header with a cable.

Chassis and Power Fan Connectors  
(4-pin CHA_FAN1)  
(see p.11, No. 19)  
Please connect fan cables to the fan connectors and match the black wire to the ground pin.

CPU Fan Connectors  
(4-pin CPU_FAN1)  
(see p.11, No. 3)  
This motherboard provides a 4-Pin CPU fan (Quiet Fan) connector. If you plan to connect a 3-Pin CPU fan, please connect it to Pin 1-3.

ATX Power Connector  
(24-pin ATXPWR1)  
(see p.11, No. 7)  
This motherboard provides a 24-pin ATX power connector. To use a 20-pin ATX power supply, please plug it along Pin 1 and Pin 13.
ATX 12V Power Connector
(8-pin ATX12V1)
(see p.11, No. 2)

This motherboard provides an 8-pin ATX 12V power connector. To use a 4-pin ATX power supply, please plug it along Pin 1 and Pin 5.

SLI/XFIRE Power Connector
(4-pin SLI/XFIRE_ PWR1)
(see p.11, No. 26)

Please connect this connector with a hard disk power connector when two graphics cards are installed on this motherboard.

Infrared Module Header
(5-pin IR1)
(see p.11, No. 27)

This header supports an optional wireless transmitting and receiving infrared module.

Serial Port Header
(9-pin COM1)
(see p.11, No. 25)

This COM1 header supports a serial port module.
2.7 Smart Switches

The motherboard has three smart switches: Power Switch, Reset Switch and Clear CMOS Switch, allowing users to quickly turn on/off the system, reset the system or clear the CMOS values.

<table>
<thead>
<tr>
<th>Switch Type</th>

2.9 Front USB 3.0 Panel Installation Guide

**Step 1**
Prepare the bundled Front USB 3.0 Panel with 2.5” HDD/SSD Rack, four HDD screws, and six chassis screws.

**Step 2**
Screw the 2.5” HDD/SSD to the Front USB 3.0 Panel with 2.5” HDD/SSD Rack with four HDD screws.

**Step 3**
Install the Front USB 3.0 Panel with 2.5” HDD/SSD Rack into the 2.5” drive bay of the chassis.

**Step 4**
Screw the Front USB 3.0 Panel with 2.5” HDD/SSD Rack to the drive bay with six chassis screws.
**Step 5**
Plug the Front USB 3.0 cable into the USB 3.0 header (USB3_4_5 or USB3_6_7) on the motherboard.

**Step 6**
The Front USB 3.0 Panel with 2.5” HDD/SSD Rack is ready to use.
2.10 Rear USB 3.0 Bracket Installation Guide

**Step 1**
Unscrew the two screws from the Front USB 3.0 Panel with 2.5” HDD/SSD Rack.

**Step 2**
Put the USB 3.0 cable and the bundled rear USB 3.0 bracket together.

**Step 3**
Screw the two screws into the rear USB 3.0 bracket.

**Step 4**
Put the rear USB 3.0 bracket into the chassis.
2.11 Using the HDMI-In Port

The HDMI-In port on this motherboard lets you easily switch between PC screen (on-board VGA) and external video source on the same monitor. This function saves you the hassle of switching cables back and forth when you want to display the screen of another device, such as smartphone, tablet, camcorder, DVD player, or another PC, onto the PC monitor.

Another useful feature of this function is that external video source can be viewed even when your PC is in standby mode or powered off. For example, you can play smartphone games or watch tablet video on your PC screen.
Connection Diagram
**Step 1**  
Connect your monitor to the **HDMI-Out** port on the motherboard via an HDMI cable.

**Step 2**  
Connect an external devices with HDMI output to the **HDMI-In** port on the motherboard via an HDMI cable.

**Step 3**  
Double-click the “F-Stream” icon on the desktop and find "HDMI-IN" function in "Tools" tab.  
Drag the switch right or left to enable **Onboard** (on-board PC screen) or **HDMI** (HDMI-In Source).

---

**or**

Use the hotkey to switch between on-board PC screen or HDMI-In Source.

---

*To change the hotkey, click the textbox next to “Hotkey:” and enter the action for the key.*

---

1. If there is no video displayed on your monitor, make sure that the cables are properly connected and make sure that “Deep S5” option in BIOS SETUP is set to [Disable].
2. If required, connect a power source to the adapter that lets the smartphone/tablet output HDMI signal.
2.12  SLI™ and Quad SLI™ Operation Guide

This motherboard supports NVIDIA® SLI™ and Quad SLI™ (Scalable Link Interface) technology that allows you to install up to two identical PCI Express x16 graphics cards. Currently, NVIDIA® SLI™ and Quad SLI™ technology supports Windows® 7 / 7 64-bit / 8 / 8 64-bit OS.

Requirements

1. You should only use identical SLI™-ready graphics cards that are NVIDIA® certified.
2. Make sure that your graphics card driver supports NVIDIA® SLI™ technology. Download the drivers from the NVIDIA® website: www.nvidia.com
3. Make sure that your power supply unit (PSU) can provide at least the minimum power your system requires. It is recommended to use a NVIDIA® certified PSU. Please refer to the NVIDIA® website for details.

2.12.1 Installing Two SLI™-Ready Graphics Cards

Step 1

Insert one graphics card into PCIE2 slot and the other graphics card to PCIE3 slot. Make sure that the cards are properly seated on the slots.

Step 2

If required, connect the auxiliary power source to the PCI Express graphics cards.
**Step 3**

Align and insert the ASRock SLI_Bridge_2S Card to the goldfingers on each graphics card. Make sure the ASRock SLI_Bridge_2S Card is firmly in place.

**Step 4**

Connect a VGA cable or a DVI cable to the monitor connector or the DVI connector of the graphics card that is inserted to PCIE2 slot.
2.12.2 Driver Installation and Setup

Install the graphics card drivers to your system. After that, you can enable the Multi-Graphics Processing Unit (GPU) in the NVIDIA® nView system tray utility. Please follow the below procedures to enable the multi-GPU.

For SLI™ and Quad SLI™ mode

**Step 1**
Double-click the NVIDIA Control Panel icon in the Windows® system tray.

**Step 2**
In the left pane, click Set SLI and PhysX configuration. Then select Maximize 3D performance and click Apply.

**Step 3**
Reboot your system.

**Step 4**
You can freely enjoy the benefits of SLI™ or Quad SLI™.
2.13 CrossFireX™, 3-Way CrossFireX™ and Quad CrossFireX™ Operation Guide

This motherboard supports CrossFireX™, 3-way CrossFireX™ and Quad CrossFireX™ that allows you to install up to three identical PCI Express x16 graphics cards. Currently CrossFireX™, 3-way CrossFireX™ and Quad CrossFireX™ are supported with Windows® 7 / 7 64-bit / 8 / 8 64-bit OS.

1. You should only use identical CrossFireX™-ready graphics cards that are AMD certified.
2. Make sure that your graphics card driver supports AMD CrossFireX™ technology. Download the drivers from the AMD’s website: www.amd.com
3. Make sure that your power supply unit (PSU) can provide at least the minimum power your system requires. It is recommended to use a AMD certified PSU. Please refer to the AMD’s website for details.
4. If you pair a 12-pipe CrossFireX™ Edition card with a 16-pipe card, both cards will operate as 12-pipe cards while in CrossFireX™ mode.
5. Different CrossFireX™ cards may require different methods to enable CrossFireX™. Please refer to AMD graphics card manuals for detailed installation guide.

2.13.1 Installing Two CrossFireX™-Ready Graphics Cards

Step 1
Insert one graphics card into PCIE2 slot and the other graphics card to PCIE3 slot. Make sure that the cards are properly seated on the slots.

Step 2
Connect two graphics cards by installing a CrossFire Bridge on the CrossFire Bridge Interconnects on the top of the graphics cards. (The CrossFire Bridge is provided with the graphics card you purchase, not bundled with this motherboard. Please refer to your graphics card vendor for details.)
2.13.2 Installing Three CrossFireX™-Ready Graphics Cards

**Step 1**
Insert one graphics card into PCIE2 slot, another graphics card to PCIE3 slot, and the other graphics card to PCIE4 slot. Make sure that the cards are properly seated on the slots.

**Step 2**
Use one CrossFire Bridge to connect the graphics cards on PCIE2 and PCIE3 slots, and use the other CrossFire Bridge to connect the graphics cards on PCIE3 and PCIE4 slots. (The CrossFire Bridge is provided with the graphics card you purchase, not bundled with this motherboard. Please refer to your graphics card vendor for details.)

**Step 3**
Connect a VGA cable or a DVI cable to the monitor connector or the DVI connector of the graphics card that is inserted to PCIE2 slot.
2.13.3 Driver Installation and Setup

**Step 1**
Power on your computer and boot into OS.

**Step 2**
Remove the AMD drivers if you have any VGA drivers installed in your system.

*The Catalyst Uninstaller is an optional download. We recommend using this utility to uninstall any previously installed Catalyst drivers prior to installation. Please check AMD’s website for AMD driver updates.*

**Step 3**
Install the required drivers and CATALYST Control Center then restart your computer. Please check AMD’s website for details.

**Step 4**
Double-click the **AMD Catalyst Control Center** icon in the Windows’ system tray.

**Step 5**
In the left pane, click **Performance** and then **AMD CrossFireX™**. Then select **Enable AMD CrossFireX** and click **Apply**. Select the GPU number according to your graphics card and click **Apply**.
2.14 Dual LAN and Teaming Operation Guide

Dual LAN with Teaming enabled on this motherboard allows two single connections to act as one single connection for twice the transmission bandwidth, making data transmission more effective and improving the quality of transmission of distant images. Fault tolerance on the dual LAN network prevents network downtime by transferring the workload from a failed port to a working port.

Before setting up Teaming, please make sure whether your Switch (or Router) supports Teaming (IEEE 802.3ad Link Aggregation). You can specify a preferred adapter in Intel PROSet. Under normal conditions, the Primary adapter handles all non-TCP/IP traffic. The Secondary adapter will receive fallback traffic if the primary fails. If the Preferred Primary adapter fails, but is later restored to an active status, control is automatically switched back to the Preferred Primary adapter.

**Step 1**

From **Device Manager**, open the properties of a team.

**Step 2**

Click the **Settings** tab.

**Step 3**

Click the **Modify Team** button.

**Step 4**

Select the adapter you want to be the primary adapter and click the **Set Primary** button.

If you do not specify a preferred primary adapter, the software will choose an adapter of the highest capability (model and speed) to act as the default primary. If a failover occurs, another adapter becomes the primary. The adapter will, however, rejoin the team as a non-primary.

*The speed of transmission is subject to the actual network environment or status even with Teaming enabled.*
Chapter 3 Software and Utilities Operation

3.1 Installing Drivers

The Support CD that comes with the motherboard contains necessary drivers and useful utilities that enhance the motherboard’s features.

Running The Support CD

To begin using the support CD, insert the CD into your CD-ROM drive. The CD automatically displays the Main Menu if “AUTORUN” is enabled in your computer. If the Main Menu does not appear automatically, locate and double click on the file “ASRSETUP.EXE” in the Support CD to display the menu.

Drivers Menu

The drivers compatible to your system will be auto-detected and listed on the support CD driver page. Please click Install All or follow the order from top to bottom to install those required drivers. Therefore, the drivers you install can work properly.

Utilities Menu

The Utilities Menu shows the application software that the motherboard supports. Click on a specific item then follow the installation wizard to install it.

To improve Windows 7 compatibility, please download and install the following hot fix provided by Microsoft. “KB2720599”: http://support.microsoft.com/kb/2720599/en-us
3.2 F-Stream

F-Stream is ASRock’s multi purpose software suite with a new interface, more new features and improved utilities, including XFast RAM, Dehumidifier, Good Night LED, FAN-Tastic Tuning, OC Tweaker and a whole lot more.

3.2.1 Installing F-Stream

When you install the all-in-one driver to your system from ASRock’s support CD, F-Stream will be auto-installed as well. After the installation, you will find the icon “F-Stream” on your desktop. Double-click the “F-Stream” icon, F-Stream main menu will pop up.

3.2.2 Using F-Stream

There are five sections in F-Stream main menu: Operation Mode, Tools, OC Tweaker, System Info and Tech Service.

Operation Mode

Choose an operation mode for your computer.
Tools
Various tools and utilities.

**XFast RAM**
Boost the system's performance and extend the HDD's or SDD's lifespan! Create a hidden partition, then assign which files should be stored in the RAM drive.

**Fast Boot**
Fast Boot minimizes your computer's boot time. Please note that Ultra Fast mode is only supported by Windows 8 and the VBIOS must support UEFI GOP if you are using an external graphics card.

**OMG**
Schedule the starting and ending hours of Internet access granted to other users. Place X marks on the time table to disable the Internet.

**Good Night LED**
Switch off the Power/HDD/LAN LEDs when the system is on, and automatically switch off the Power and Keyboard LEDs when the system enters into Standby/Hibernation mode.

**FAN-Tastic Tuning**
Configure up to five different fan speeds using the graph. The fans will automatically shift to the next speed level when the assigned temperature is met.
Dehumidifier
Prevent motherboard damages due to dampness. Enable this function and configure the period of time until the computer powers on, and the duration of the dehumidifying process.

HDMI-IN
Connect two different devices to one monitor and toggle between the primary and secondary screen without replugging the connectors every time. Please set a hotkey for switching between the two devices.

Mouse Polling
You are installing the mouse into Fatal1ty Mouse Port. After applying your mouse polling rate, move your mouse to feel it!

OC Tweaker
Configurations for overclocking the system.

System Info
View information about the system.
Tech Service

Contact Tech Service.
3.3 Intel® Rapid Start Technology

Intel® Rapid Start Technology enables your system to wake up faster from deep sleep, saving time and power consumption. Feel secure to know that your system will resume to working condition even if an unexpected power loss happens while the PC is in sleep mode.

3.3.1 System Requirements

- Confirm whether your motherboard supports this feature.
- Operating system: Microsoft Windows 8/7 (32- or 64-bit edition)
- Set the SATA mode to AHCI. If Windows 8/7 is already installed under IDE mode, directly changing the SATA mode to AHCI may cause Windows 8/7 to crash while booting. If your system is not in AHCI mode, please follow the instructions below.

There are certain risks. Please backup any important data before operating to avoid loss.

1. Press Win + R simultaneously in Windows 8/7, type “Regedit” into the word box then click OK.

2. Enter into HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\services\msahci in Windows Registry Editor. Double click on the value Start and change the value from 3 into 0. Click on OK.
3. Exit the Registry Editor window and restart the computer.

4. Press F2 to enter BIOS, then go to Advanced -> Storage Configuration and change SATA Mode to AHCI. Press F10 to save changes and exit.

5. Enter Windows 8/7. Windows will discover the new device and install AHCI drivers automatically.

3.3.2 Setup Guide

Configuring Rapid Start

**Step 1**

Run ASRock Rapid Start utility from Start -> All Programs -> ASRock Utility.

**Step 2**

If you have more than one hard drives in your system, you must select one, then choose the Partition Size desired for your hidden partition and click on Create. The system will automatically create a hidden partition according to your settings. If there are SSD's installed into your system, it is recommended to create the partition on the SSD.
Step 3

When prompted to restart after the setup, click Yes to reboot.

Step 4

Double-click the Intel® Rapid Start Technology Manager icon in the Windows system tray.
**Step 5**

Make sure Rapid Start is on. Drag the slider to configure the time. For example, if the timer value is set to ten minutes, the system will enable Rapid Start mode after entering sleep state for ten minutes. If the timer is set to 0 minutes, Windows will immediately enable Rapid Start mode as it enters sleep state.

![Intel® Rapid Start Technology Manager](image1)

**Using Rapid Start**

1. You may shut down the computer without terminating the applications or files you are executing currently. Click on Windows Start -> the arrow next to Shut down, and click on **Sleep**.

![Default Programs](image2)

2. Windows system will enter sleep state.

3. According to your settings in Rapid Start Technology Manager, the system will automatically wake up and enable Rapid Start mode after entering sleep.
state for a period of time. The power of the computer in Rapid Start mode can be cut off, it will not cause data loss of the programs or files you were executing before entering sleep state.

4. When you wish to continue to use the computer just hit the power button, the system will rapidly return to Windows, the programs and files which you were using before entering sleep state will be accessible immediately.
3.4 Intel® Smart Connect Technology

Intel® Smart Connect Technology is a feature that periodically wakes your computer from Windows® sleep state to refresh email or social networking applications. It saves your waiting time and keeps the content always up-to-date.

3.4.1 System Requirements

- Confirm whether your motherboard supports this feature.
- Operating system: Microsoft Windows 8/7 (32- or 64-bit edition)
- Set the SATA mode to AHCI. If Windows 8/7 is already installed under IDE mode, directly changing the SATA mode to AHCI may cause Windows 8/7 to crash while booting. If your system is not in AHCI mode, please follow the instructions below.

There are certain risks. Please backup any important data before operating to avoid loss.

1. Press Win + R simultaneously in Windows 8/7, type “Regedit” into the word box then click OK.

![Regedit](image)

2. Enter into HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\services\msahci in Windows Registry Editor. Double click on the value Start and change the value from 3 into 0. Click on OK.
3.4.2 Setup Guide

Installing ASRock Smart Connect Utility

Step 1

Install ASRock Smart Connect Utility, which is located in the folder at the following path of the Support CD: \ASRock Utility > Smart Connect.

Step 2

Once installed, run ASRock Smart Connect from your desktop or go to Windows Start -> All Programs -> ASRock Utility.
**Step 3**

Click the **Add** button. Take Foxmail as an example, add Foxmail to the Application list.

![Step 3 Image](image1.png)

**Step 4**

Select Foxmail from the **Application List**, then click the arrow pointing right to add this application to the **Smart Connect List**.

![Step 4 Image](image2.png)

**Step 5**

Click **Apply** to enable Smart Connect.
**Step 6**
Double-click the Intel® Smart Connect Technology Manager icon in the Windows system tray.

**Step 7**
Drag the slider to configure how often the system will connect to the network to download updates. Shorter durations will provide more frequent updates, but may cause more power consumption.

![Intel® Smart Connect Technology Manager](image1.png)

**Using Smart Connect**

1. Keep the applications which you wish to connect to the internet and receive updates while the system is in sleep state running. Foxmail for instance, keep Foxmail running.

2. Click on Windows Start -> the arrow next to Shut down, and click on **Sleep**.

![Windows Shut down](image2.png)

3. Windows system will enter sleep state.
4. The system will wake up from sleep state periodically, and then start to update Foxmail. The screen will not display anything so the computer can maintain minimum power usage. Afterwards, the system will automatically return to sleep state again.

5. Upon waking up the system, you will find the new mail that were sent to you during sleep state are already updated and ready to be read in Foxmail.
3.5 Intel® Remote Wake Technology

Intel® Remote Wake Technology allows you to use programs or services over the Internet to wake up your home computer from energy efficient sleep mode.

Before configuring this feature, verify the following.

- Remote Wake has been enabled in "Intel® Smart Connect Technology Manager".
- Make sure that the "PCI Device Power On" is enabled in UEFI SETUP UTILITY > Advanced > ACPI Configuration.

3.5.1 Configuring and Using MeshCentral

MeshCentral allows you to remotely wake up a PC from any network using a single web site. Just download and install the mesh agent on your computers and your computers will show up in the "My Devices" section of MeshCentral.com.

Creating a Mesh

**Step 1**

Login to Meshcentral.com.

If you have not created a MeshCentral account, go to MeshCentral.com and create a new account.

**Step 2**

Click the "My Account" tab. Then click on "New" to create a new mesh.
**Step 3**
A new mesh window will pop up. Enter a mesh name and password.

**Step 4**
Select all the checkboxes and click **Create Mesh**.

---

**Downloading and Installing Mesh Agent**

**Step 1**
Click Install on the My Account page.

**Step 2**
Select the mesh and download both files. Make sure both files are in the same directory.

**Step 3**
Right-click on MeshAgent.exe and select **Run as administrator**.
Step 4

Click Install / Update.

Step 5

Wait a minute for the New Machine to appear in "My Device".
**Step 6**
Check whether "Intel Remote Wake" appeared or not.

**Z87 - General**

<table>
<thead>
<tr>
<th>Mesh Name</th>
<th>mesh1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating System</td>
<td>Microsoft® Windows® 8</td>
</tr>
<tr>
<td>Mesh Agent</td>
<td>WinN2-Service v0.1.62</td>
</tr>
<tr>
<td>Extras</td>
<td>Intel® Remote Wake supported</td>
</tr>
</tbody>
</table>

**Waking up Your PC using PC**

**Step 1**
On the "My Devices" page, click on **Power Actions**.

**Step 2**
Click on **Wake** or **Sleep**.

Waking up Your PC Using Mobile Device

Before waking up your home computer using a mobile device, please log out of Mesh-Central on other previously used computers or devices.

Step 1
Login to meshcentral.com/m.

Step 2
Select a Machine.

Step 3
Click on Wake or Sleep.

Tutorial Video
3.5.2 Configuring and Using Splashtop

Splashtop is a remote desktop access software that lets you remotely access your home computer from your mobile device.

Before configuring this feature, verify that "Remote Wake" has been enabled in "Intel" Smart Connect Technology Manager".

Setup Guide

**Step 1**
Download and install the **Streamer** on your home computer, which is located in the folder at the following path of the Support CD: \ASRock Utility > Splashtop Streamer. Then enter your Splashtop Account. If you have not created a Splashtop account, create one.

**Step 2**
Download and install "Splashtop 2" on your mobile device and log into the app.

Using Remote Wakeup

**Step 1**
In "Splashtop 2", tap the edit button next to an offline machine from the list.

**Step 2**
Tap "Wake up this computer".
Using Remote Control

**Step 1**
In "Splashtop 2", tap an online machine from the list to connect to your home computer.

**Step 2**
Start remotely accessing your home computer.

⚠️ The functionality and price of the Splashtop APP and subscription fee is subject to change. Please check www.splashtop.com for details.
Accessing Data

Playing Video
3.6 Start8

For those Windows 8 users who miss the Start Menu, Start8 is an ideal solution that brings back the familiar Start Menu along with added customizations for greater efficiency.

3.6.1 Installing Start8

Install Start8, which is located in the folder at the following path of the Support CD: \ASRock Utility > Start8.

3.6.2 Configuring Start8

Style

![Start8 Configuration](image)

Select between the Windows 7 style and Windows 8 style Start Menu. Then select the theme of the Start Menu and customize the style of the Start icon.
Configure provides configuration options, including icon sizes, which shortcuts you want Start Menu to display, quick access to recently used apps, the functionality of the power button, and more.

Control
Control lets you configure what a click on the start button or a press on the Windows key does.

**Desktop**

Desktop allows you to disable the hot corners when you are working on the desktop. It also lets you choose whether or not the system boots directly into desktop mode and bypass the Metro user interface.

**About**

Displays information about Start8.
3.7 SBX Pro Studio Technology

This section explains how to configure your ASRock Game Blaster using SBX Pro Studio.

SBX Pro Studio

Click the power button on the left to activate or deactivate.

**Surround**

Control the level of audio immersion in music, movies and games.

**Crystalizer**

Enhance music and movies to make them sound livelier.

**Bass**

Control the desired level of bass.

**Crossover Frequency**

Redirect all frequencies below this value to the optimal speaker for better bass response.

**Smart Volume**

Adjust the loudness of your audio playback automatically to minimize sudden volume changes.
**Dialog Plus**
Enhance the voices in movies for clearer dialog.

**CRYSTALVOICE**

Select a recording device

**Mic Volume**
Control the level of mic volume.

**Mic Boost**
Control the level of mic boost.

**CrystalVoice**
Click the power button on the left to activate or deactivate.

**FX**
Morph your voice into different characters and accents.

**Smart Volume**
Be heard clearly without having to shout or whisper.

**Noise Reduction**
Eliminate unwanted background noise in your conversation.
Acoustic Echo Cancellation
 Eliminate echoes that interfere with your conversation.

SCOUT MODE

Scout Mode
 Enable or disable scout mode. This proprietary technology allows you to hear your enemies from further away, giving you a distinct tactical advantage in combat.

Hot Key Configuration
 Configure hot keys to enable or disable scout mode.
SPEAKERS/HEADPHONES

Speakers / Headphones Configuration
Select the device connected.

If there are both speakers and front headphones connected, please select the device you desire to use as audio output.

Optional Speakers
Center
Enable or disable center speaker.

Subwoofer
Enable or disable subwoofer.

Rear pair
Enable or disable rear pair speakers.

Full-Range Speakers:
Select full-range speakers.
Bass Management
Bass Redirection
Enable or disable bass redirection.

Subwoofer Gain
Enable or disable subwoofer gain.

Crossover Frequency
Redirect all frequencies below this value to the optimal speaker for better bass response.

MIXER

Playback
Speakers
Control the level of speakers playback.

SPDIF-Out
Control the level of SPDIF-Out playback.

Balance
Control the level of various speaker’s balance.
REC

What U Hear
Control the level of playback redirect.

EQUALIZER

EQ
Choose from Flat, Acoustic, Classical, Country, Dance, Jazz, New Age, Pop, Rock and Vocal.

JACK SETUP
Device Connected:
Select the device connected.

Show Jack Setup dialog when an audio jack is inserted
Enable or disable Jack Setup dialog.
ADVANCED FEATURES

Play stereo mix to digital output
Enable or disable play stereo mix to digital output.

PROFILE
User Profiles
You can save, load or delete your user profiles. The default is <Custom>.

Note
1. If you want to hear your own voice through the microphone (Playback mode).
   You can change your settings to "playback mode" by checking the "Listen to this device" box in Control panel > Sound > Recording > Microphone > Properties > Listen.

2. If you want to change your playback device to a SPDIF-Out device, go into Control panel > Sound > Playback, then right click on SPDIF-Out and check the "Set as Default Device" option.
3.8 XSplit Broadcaster

XSplit Broadcaster is a desktop application designed to make your multimedia broadcasting, live-streaming and recording a lot easier and more fun to do, we are giving away the 3 months premium license which is worth US$24.95 for free!

3.8.1 Live Streaming Your Gameplay

Step 1

Go to Start > All Programs > XSplit > XSplit Broadcaster to launch it.

Step 2

Log in with your own username and password. (If you do not have an XSplit account, click No XSplit account? to register.)
**Step 3**
Go to Broadcast > Add Channels....

![Add Channels](image)

**Step 4**
Click Add....

![Add Channels](image)

**Step 5**
Select a platform for live streaming.
*Before you start streaming, you need to register an account for the streaming service website, such as Twitch.tv, USTREAM, or other livestreaming services.
**Step 6**

Fill in your platform's **Username** and **Password**.

Based on your needs, configure the Video and Audio Encoding settings. Click **OK**.

![Image of Twitch Properties window]

**Step 7**

The channel then appears in your broadcast list. Click **Apply** and **OK** to save the settings.

![Image of XSplit Broadcaster - User Settings window]
**Step 8**

Go to **Broadcast** and select the platform to enable live streaming.

![Broadcast interface](image)

A link to view your live Broadcast has been copied for you automatically. Simply press CTRL-V or right click and choose Paste to paste the link into the browser, and you can see your broadcast.

To disable live streaming, go to **Broadcast** again and deselect the platform.

**3.8.2 Recording Your Gameplay**

**Step 1**

Go to **Broadcast > Local recording** to start recording.

![Local recording](image)

**Step 2**

To stop recording, Go to **Broadcast** again and deselect **Local recording**.

**Step 3**

Go to **Tools > My Recordings**...to access your recordings
Chapter 4 UEFI SETUP UTILITY

4.1 Introduction

ASRock Interactive UEFI is a blend of system configuration tools, cool sound effects and stunning visuals. Not only will it make BIOS setup less difficult but also a lot more amusing. This section explains how to use the UEFI SETUP UTILITY to configure your system. You may run the UEFI SETUP UTILITY by pressing <F2> or <Del> right after you power on the computer, otherwise, the Power-On-Self-Test (POST) will continue with its test routines. If you wish to enter the UEFI SETUP UTILITY after POST, restart the system by pressing <Ctl> + <Alt> + <Delete>, or by pressing the reset button on the system chassis. You may also restart by turning the system off and then back on.

Because the UEFI software is constantly being updated, the following UEFI setup screens and descriptions are for reference purpose only, and they may not exactly match what you see on your screen.

4.1.1 UEFI Menu Bar

The top of the screen has a menu bar with the following selections:

- **Main**: For setting system time/date information
- **OC Tweaker**: For overclocking configurations
- **Advanced**: For advanced system configurations
- **Tool**: Useful tools
- **H/W Monitor**: Displays current hardware status
- **Boot**: For configuring boot settings and boot priority
- **Security**: For security settings
- **Exit**: Exit the current screen or the UEFI Setup Utility
4.1.2 Navigation Keys

Use <←→> key or <←→> key to choose among the selections on the menu bar, and use <↑> key or <↓> key to move the cursor up or down to select items, then press <Enter> to get into the sub screen. You can also use the mouse to click your required item.

Please check the following table for the descriptions of each navigation key.

<table>
<thead>
<tr>
<th>Navigation Key(s)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>+ / -</td>
<td>To change option for the selected items</td>
</tr>
<tr>
<td>&lt;Tab&gt;</td>
<td>Switch to next function</td>
</tr>
<tr>
<td>&lt;PGUP&gt;</td>
<td>Go to the previous page</td>
</tr>
<tr>
<td>&lt;PGDN&gt;</td>
<td>Go to the next page</td>
</tr>
<tr>
<td>&lt;HOME&gt;</td>
<td>Go to the top of the screen</td>
</tr>
<tr>
<td>&lt;END&gt;</td>
<td>Go to the bottom of the screen</td>
</tr>
<tr>
<td>&lt;F1&gt;</td>
<td>To display the General Help Screen</td>
</tr>
<tr>
<td>&lt;F4&gt;</td>
<td>Toggle sound on/off</td>
</tr>
<tr>
<td>&lt;F7&gt;</td>
<td>Discard changes and exit the SETUP UTILITY</td>
</tr>
<tr>
<td>&lt;F9&gt;</td>
<td>Load optimal default values for all the settings</td>
</tr>
<tr>
<td>&lt;F10&gt;</td>
<td>Save changes and exit the SETUP UTILITY</td>
</tr>
<tr>
<td>&lt;F12&gt;</td>
<td>Print screen</td>
</tr>
<tr>
<td>&lt;ESC&gt;</td>
<td>Jump to the Exit Screen or exit the current screen</td>
</tr>
</tbody>
</table>
4.2 Main Screen

When you enter the UEFI SETUP UTILITY, the Main screen will appear and display the system overview.

Active Page on Entry

Select the default page when entering the UEFI setup utility.

UEFI Guide

UEFI Guide is a quick tutorial for ASRock’s UEFI setup Utility. You may abort the tutorial by pressing “esc”.
4.3 OC Tweaker Screen

In the OC Tweaker screen, you can set up overclocking features.

CPU Configuration

CPU Ratio

The CPU speed is determined by the CPU Ratio multiplied with the BCLK. Increasing the CPU Ratio will increase the internal CPU clock speed without affecting the clock speed of other components.

CPU Cache Ratio

The CPU Internal Bus Speed Ratio. The maximum should be the same as the CPU Ratio.

BCLK/PCIE Frequency

The CPU speed is determined by the CPU Ratio multiplied with the BCLK. Increasing the BCLK will increase the internal CPU clock speed but also affect the clock speed of other components.

Because the UEFI software is constantly being updated, the following UEFI setup screens and descriptions are for reference purpose only, and they may not exactly match what you see on your screen.
Spread Spectrum
Enable Spread Spectrum to reduce electromagnetic interference for passing EMI tests. Disable to achieve higher clock speeds when overclocking.

Intel SpeedStep Technology
Intel SpeedStep technology allows processors to switch between multiple frequencies and voltage points for better power saving and heat dissipation.

Intel Turbo Boost Technology
Intel Turbo Boost Technology enables the processor to run above its base operating frequency when the operating system requests the highest performance state.

Filter PLL Frequency
CPU BCLK Filter Frequency. Choose 1.6 for better overclocking capabilities.

Long Duration Power Limit
Configure Package Power Limit 1 in watts. When the limit is exceeded, the CPU ratio will be lowered after a period of time. A lower limit can protect the CPU and save power, while a higher limit may improve performance.

Long Duration Maintained
Configure the period of time until the CPU ratio is lowered when the Long Duration Power Limit is exceeded.

Short Duration Power Limit
Configure Package Power Limit 2 in watts. When the limit is exceeded, the CPU ratio will be lowered immediately. A lower limit can protect the CPU and save power, while a higher limit may improve performance.

Primary Plane Current Limit
Configure the current limit of the CPU under Turbo Mode in ampere. A lower limit can protect the CPU and save power, while a higher limit may improve performance.

GT Frequency
Configure the frequency of the integrated GPU.

GT Voltage Mode
Auto: For optimized settings.
Adaptive: Add voltage to the integrated GPU when the system is under heavy load.
Override: The voltage is fixed.

GT Adaptive Voltage
Configure the fixed voltage added to the integrated GPU.

GT Voltage Offset
Configure the voltage added to the integrated GPU when the system is under heavy load.

DRAM Timing Configuration

Load XMP Setting
Load XMP settings to overclock the DDR3 memory and perform beyond standard specifications.

DRAM Reference Clock
Select Auto for optimized settings.

DRAM Frequency
If [Auto] is selected, the motherboard will detect the memory module(s) inserted and assign the appropriate frequency automatically.

DRAM Configuration
DRAM Tweaker

Fine tune the DRAM settings by leaving marks in checkboxes. Click OK to confirm and apply your new settings.

CAS# Latency (tCL)

The time between sending a column address to the memory and the beginning of the data in response.

RAS# to CAS# Delay (tRCD)

The number of clock cycles required between the opening of a row of memory and accessing columns within it.

Row Precharge Time (tRP)

The number of clock cycles required between the issuing of the precharge command and opening the next row.

RAS# Active Time (tRAS)

The number of clock cycles required between a bank active command and issuing the precharge command.

Command Rate (CR)

The delay between when a memory chip is selected and when the first active command can be issued.

Write Recovery Time (tWR)

The amount of delay that must elapse after the completion of a valid write operation, before an active bank can be precharged.

Refresh Cycle Time (tRFC)

The number of clocks from a Refresh command until the first Activate command to the same rank.

RAS to RAS Delay (tRRD)

The number of clocks between two rows activated in different banks of the same rank.

Write to Read Delay (tWTR)

The number of clocks between the last valid write operation and the next read command to the same internal bank.
Read to Precharge (tRTP)
The number of clocks that are inserted between a read command to a row pre-
charge command to the same rank.

Four Activate Window (tFAW)
The time window in which four activates are allowed the same rank.

CAS Write Latency (tCWL)
Configure CAS Write Latency.

tREFI
Configure refresh cycles at an average periodic interval.

tCKE
Configure the period of time the DDR3 initiates a minimum of one refresh
command internally once it enters Self-Refresh mode.

tRDRD
Configure between module read to read delay.

tRDRDDR
Configure between module read to read delay from different ranks.

tRDRDDD
Use this to change DRAM tRWSR Auto/Manual settings. The default is [Auto].

tWRRD
Configure between module write to read delay.

tWRRDDR
Configure between module write to read delay from different ranks.

tWRRDDD
Use this to change DRAM tRRSR Auto/Manual settings. The default is [Auto].
Configure between module write to read delay from different DIMMs.

tWRWR
Configure between module write to write delay.
tWRWRDR
Configure between module write to write delay from different ranks.

tWRWRDD
Configure between module write to write delay from different DIMMs.

trDWR
Configure between module read to write delay.

trDWRDR
Configure between module read to write delay from different ranks.

trDWRDD
Configure between module read to write delay from different DIMMs.

RTL (CHA)
Configure round trip latency for channel A.

RTL (CHB)
Configure round trip latency for channel B.

IO-L (CHA)
Configure IO latency for channel A.

IO-L (CHB)
Configure IO latency for channel B.

ODT WR (CHA)
Configure the memory on die termination resistors' WR for channel A.

ODT WR (CHB)
Configure the memory on die termination resistors' WR for channel B.

ODT NOM (CHA)
Use this to change ODT (CHA) Auto/Manual settings. The default is [Auto].

ODT NOM (CHB)
Use this to change ODT (CHB) Auto/Manual settings. The default is [Auto].
Command Tri State
Enable for DRAM power saving.

MRC Fast Boot
Enable Memory Fast Boot to skip DRAM memory training for booting faster.

FIVR Configuration
FIVR Switch Frequency Signature
Select whether to boost or lower the FIVR Switch Frequency.

FIVR Switch Frequency Offset
Configure the percentage of frequency boost or deduction.

CPU Voltage Mode
Auto: For optimized settings.
Adaptive: Add voltage to the CPU when the system is under heavy load.
Override: The voltage is fixed.

CPU Override Voltage
Configure the voltage added to the CPU when the system is under heavy load.

CPU Voltage Offset
Configure the dynamic CPU voltage added to the CPU.

CPU Cache Override Voltage
Add voltage to the CPU Cache when the system is under heavy load.

CPU Cache Adaptive Voltage
Configure the voltage added to the CPU Cache when the system is under heavy load.

CPU Cache Voltage Offset
Configure the voltage for the CPU Cache. Setting the voltage higher may increase system stability when overclocking.
System Agent Voltage Offset
Configure the voltage for the System Agent. Setting the voltage higher may increase system stability when overclocking.

CPU Analog IO Voltage Offset
CPU I/O Analog Voltage.

CPU Digital IO Voltage Offset
CPU I/O Digital Voltage.

CPU Integrated VR Faults
Disable FIVR Faults to raise the threshold to trigger CPU over current protection and over voltage protection for better overclocking capabilities.

CPU Integrated VR Efficiency Mode
Enable FIVR Efficiency Management for power saving. Disable for better performance and overclocking capabilities.

Voltage Configuration

CPU Input Voltage
Configure the voltage for the CPU.

CPU Load-Line Calibration
CPU Load-Line Calibration helps prevent CPU voltage droop when the system is under heavy load.

Vcore External Offset
The fixed external voltage input to the CPU.

DRAM Voltage
Use this to configure DRAM Voltage. The default value is [Auto].

PCH 1.05V Voltage
Chipset 1.05V Voltage. Use default settings for best performance.

PCH 1.5V Voltage
I/O 1.5V Voltage. Use default settings for best performance.
4.4 Advanced Screen

In this section, you may set the configurations for the following items: CPU Configuration, Chipset Configuration, Storage Configuration, Intel® Rapid Start Technology, Intel® Smart Connect Technology, Super IO Configuration, ACPI Configuration and USB Configuration.

Setting wrong values in this section may cause the system to malfunction.
4.4.1 CPU Configuration

Intel Hyper Threading Technology

Intel Hyper Threading Technology allows multiple threads to run on each core, so that the overall performance on threaded software is improved.

Active Processor Cores

Select the number of cores to enable in each processor package.

CPU C States Support

Enable CPU C States Support for power saving. It is recommended to keep C3, C6 and C7 all enabled for better power saving.

Enhanced Halt State (C1E)

Enable Enhanced Halt State (C1E) for lower power consumption.

CPU C3 State Support

Enable C3 sleep state for lower power consumption.

CPU C6 State Support

Enable C6 deep sleep state for lower power consumption.

CPU C7 State Support

Enable C7 deep sleep state for lower power consumption.
Package C State Support
Enable CPU, PCIe, Memory, Graphics C State Support for power saving.

CPU Thermal Throttling
Enable CPU internal thermal control mechanisms to keep the CPU from overheating.

No-Execute Memory Protection
Processors with No-Execution Memory Protection Technology may prevent certain classes of malicious buffer overflow attacks.

Intel Virtualization Technology
Intel Virtualization Technology allows a platform to run multiple operating systems and applications in independent partitions, so that one computer system can function as multiple virtual systems.

Hardware Prefetcher
Automatically prefetch data and code for the processor. Enable for better performance.

Adjacent Cache Line Prefetch
Automatically prefetch the subsequent cache line while retrieving the currently requested cache line. Enable for better performance.
4.4.2 Chipset Configuration

Primary Graphics Adapter
Select a primary VGA.

VT-d
Intel® Virtualization Technology for Directed I/O helps your virtual machine monitor better utilize hardware by improving application compatibility and reliability, and providing additional levels of manageability, security, isolation, and I/O performance.

PCIE2 Link Speed
Select the link speed for PCIE2.

PCIE4 Link Speed
Select the link speed for PCIE4.

PCIE5 Link Speed
Select the link speed for PCIE5.

Share Memory
Configure the size of memory that is allocated to the integrated graphics processor when the system boots up.
IGPU Multi-Monitor
Select disable to disable the integrated graphics when an external graphics card is installed. Select enable to keep the integrated graphics enabled at all times.

Render Standby
Power down the render unit when the GPU is idle for lower power consumption.

Onboard HD Audio
Enable/disable onboard HD audio. Set to Auto to enable onboard HD audio and automatically disable it when a sound card is installed.

Onboard LAN1
Enable or disable the onboard network interface controller.

Onboard LAN2
Enable or disable the onboard network interface controller.

Deep Sleep
Configure deep sleep mode for power saving when the computer is shut down.

Restore on AC/Power Loss
Select the power state after a power failure. If [Power Off] is selected, the power will remain off when the power recovers. If [Power On] is selected, the system will start to boot up when the power recovers.

Good Night LED
By enabling Good Night LED, the Power/HDD LEDs will be switched off when the system is on. It will also automatically switch off the Power and Keyboard LEDs when the system enters into Standby/Hibernation mode.

Onboard Debug Port LED
Enable/disable the onboard Dr. Debug LED.
4.4.3 Storage Configuration

SATA Controller(s)
Enable/disable the SATA controllers.

SATA Mode Selection
IDE: For better compatibility.
AHCI: Supports new features that improve performance.
RAID: Combine multiple disk drives into a logical unit.

AHCI (Advanced Host Controller Interface) supports NCQ and other new features that will improve SATA disk performance but IDE mode does not have these advantages.

SATA Aggressive Link Power Management
SATA Aggressive Link Power Management allows SATA devices to enter a low power state during periods of inactivity to save power. It is only supported by AHCI mode.

Dynamic Storage Accelerator
Keep this option enabled for higher HDD and SDD I/O performance, lower latency and increased system responsiveness.
Hard Disk S.M.A.R.T.
S.M.A.R.T stands for Self-Monitoring, Analysis, and Reporting Technology. It is a monitoring system for computer hard disk drives to detect and report on various indicators of reliability.

ASMedia SATA3 Mode
IDE: For better compatibility.
AHCI: Supports new features that improve performance.
Disable: Disable ASMedia SATA port.

SATA Boot ROM
Enable to load ASMedia option ROM for better compatibility. Disable for faster boot time.
4.4.4 Intel® Rapid Start Technology

Intel® Rapid Start Technology is a new zero power hibernation mode which allows users to resume in just 5-6 seconds.
**4.4.5 Intel® Smart Connect Technology**

Intel® Smart Connect Technology automatically updates your email and social networks, such as Twitter, Facebook, etc. while the computer is in sleep mode.
4.4.6 Super IO Configuration

Serial Port
Enable or disable the Serial port.

Serial Port Address
Select the address of the Serial port.

Infrared Port
Enable or disable the Infrared port.
4.4.7 ACPI Configuration

Suspend to RAM
Select disable for ACPI suspend type S1. It is recommended to select auto for ACPI S3 power saving.

Check Ready Bit
Enable to enter the operating system after S3 only when the hard disk is ready, this is recommended for better system stability.

ACPI HPET Table
Enable the High Precision Event Timer for better performance and to pass WHQL tests.

PS/2 Keyboard Power On
Allow the system to be waked up by a PS/2 Keyboard.

PCI Devices Power On
Allow the system to be waked up by a PCI device and enable wake on LAN.

Wake From Onboard LAN
Allow the system to be waked up by the Onboard Intel I217V LAN.
Ring-In Power On
Allow the system to be waked up by onboard COM port modem Ring-In signals.

RTC Alarm Power On
Allow the system to be waked up by the real time clock alarm. Set it to By OS to let it be handled by your operating system.

USB Keyboard/Remote Power On
Allow the system to be waked up by an USB keyboard or remote controller.

USB Mouse Power On
Allow the system to be waked up by an USB mouse.
4.4.8 USB Configuration

USB Controller
Enable or disable all the USB 2.0 ports.

USB 3.0 Controller
Enable or disable all the USB 3.0 ports.

Legacy USB Support
Enable or disable Legacy OS Support for USB 2.0 devices. If you encounter USB compatibility issues it is recommended to disable legacy USB support. Select UEFI Setup Only to support USB devices under the UEFI setup and Windows/Linux operating systems only.

Legacy USB 3.0 Support
Enable or disable Legacy OS Support for USB 3.0 devices.
4.5 Tools

System Browser
ASRock System Browser shows the overview of your current PC and the devices connected.

OMG (Online Management Guard)
Administrators are able to establish an internet curfew or restrict internet access at specified times via OMG. You may schedule the starting and ending hours of internet access granted to other users. In order to prevent users from bypassing OMG, guest accounts without permission to modify the system time are required.

UEFI Tech Service
Contact ASRock Tech Service if you are having trouble with your PC. Please setup network configuration before using UEFI Tech Service.

Easy RAID Installer
Easy RAID Installer helps you to copy the RAID driver from the support CD to your USB storage device. After copying the drivers please change the SATA mode to RAID, then you can start installing the operating system in RAID mode.

Easy Driver Installer
For users that don’t have an optical disk drive to install the drivers from our support CD, Easy Driver Installer is a handy tool in the UEFI that installs the LAN driver to your system via an USB storage device, then downloads and installs the other
required drivers automatically.

**Instant Flash**
Save UEFI files in your USB storage device and run Instant Flash to update your UEFI.

**Secure Backup UEFI**
Whenever one of the ROM images are corrupted or outdated, switch to the other flash ROM and execute Secure Backup UEFI to duplicate the current working ROM image to the secondary flash ROM.

**Internet Flash**
ASRock Internet Flash downloads and updates the latest UEFI firmware version from our servers for you. Please setup network configuration before using Internet Flash.
*For BIOS backup and recovery purpose, it is recommended to plug in your USB pen drive before using this function.

**Network Configuration**
Use this to configure internet connection settings for Internet Flash.

**Internet Setting**
Enable or disable sound effects in the setup utility.
UEFI Download Server
Select a server to download the UEFI firmware.

Dehumidifier Function
If Dehumidifier Function is enabled, the computer will power on automatically to dehumidify the system after entering S4/S5 state.

Dehumidifier Period
Configure the period of time until the computer powers on and enables Dehumidifier after entering S4/S5 state.

Dehumidifier Duration
Configure the duration of the dehumidifying process before it returns to S4/S5 state.

Dehumidifier CPU Fan Setting
Configure the speed of the CPU fan while Dehumidifier is enabled. The higher the value, the faster the fan speed.
Max: 255
Min: 1

Save User Default
Type a profile name and press enter to save your settings as user default.

Load User Default
Load previously saved user defaults.
4.6 Hardware Health Event Monitoring Screen

This section allows you to monitor the status of the hardware on your system, including the parameters of the CPU temperature, motherboard temperature, fan speed and voltage.

CPU Fan 1 & 2 Setting
Select a fan mode for CPU Fans 1&2, or choose Customize to set 5 CPU temperatures and assign a respective fan speed for each temperature.

Chassis Fan 1 Setting
Select a fan mode for Chassis Fan 1, or choose Customize to set 5 CPU temperatures and assign a respective fan speed for each temperature.

Chassis Fan 2 Setting
Select a fan mode for Chassis Fan 2, or choose Customize to set 5 CPU temperatures and assign a respective fan speed for each temperature.

Chassis Fan 3 Setting
Select a fan mode for Chassis Fan 3, or choose Customize to set 5 CPU temperatures and assign a respective fan speed for each temperature.

Over Temperature Protection
When Over Temperature Protection is enabled, the system automatically shuts down when the motherboard is overheated.
4.7 Boot Screen

This section displays the available devices on your system for you to configure the boot settings and the boot priority.

Fast Boot

Fast Boot minimizes your computer’s boot time. In fast mode you may not boot from an USB storage device. Ultra Fast mode is only supported by Windows 8 and the VBIOS must support UEFI GOP if you are using an external graphics card. Please notice that Ultra Fast mode will boot so fast that the only way to enter this UEFI Setup Utility is to Clear CMOS or run the Restart to UEFI utility in Windows.

Boot From Onboard LAN

Allow the system to be waked up by the onboard LAN.

Setup Prompt Timeout

Configure the number of seconds to wait for the setup hot key.

Bootup Num-Lock

Select whether Num Lock should be turned on or off when the system boots up.

Boot Beep

Select whether the Boot Beep should be turned on or off when the system boots up. Please note that a buzzer is needed.
Full Screen Logo
Enable to display the boot logo or disable to show normal POST messages.

AddOn ROM Display
Enable AddOn ROM Display to see the AddOn ROM messages or configure the AddOn ROM if you’ve enabled Full Screen Logo. Disable for faster boot speed.

Boot Failure Guard
If the computer fails to boot for a number of times the system automatically restores the default settings.

Boot Failure Guard Count
Configure the number of attempts to boot until the system automatically restores the default settings.

CSM (Compatibility Support Module)

![CSM Screenshot]

CSM
Enable to launch the Compatibility Support Module. Please do not disable unless you’re running a WHCK test. If you are using Windows 8 64-bit and all of your devices support UEFI, you may also disable CSM for faster boot speed.
Launch PXE OpROM Policy
Select UEFI only to run those that support UEFI option ROM only. Select Legacy only to run those that support legacy option ROM only.

Launch Storage OpROM Policy
Select UEFI only to run those that support UEFI option ROM only. Select Legacy only to run those that support legacy option ROM only.

Launch Video OpROM Policy
Select UEFI only to run those that support UEFI option ROM only. Select Legacy only to run those that support legacy option ROM only.
4.8 Security Screen

In this section you may set or change the supervisor/user password for the system. You may also clear the user password.

Supervisor Password
Set or change the password for the administrator account. Only the administrator has authority to change the settings in the UEFI Setup Utility. Leave it blank and press enter to remove the password.

User Password
Set or change the password for the user account. Users are unable to change the settings in the UEFI Setup Utility. Leave it blank and press enter to remove the password.

Secure Boot
Enable to support Windows 8 Secure Boot.
4.9 Exit Screen

Save Changes and Exit
When you select this option the following message, “Save configuration changes and exit setup?” will pop out. Select [OK] to save changes and exit the UEFI SETUP UTILITY.

Discard Changes and Exit
When you select this option the following message, “Discard changes and exit setup?” will pop out. Select [OK] to exit the UEFI SETUP UTILITY without saving any changes.

Discard Changes
When you select this option the following message, “Discard changes?” will pop out. Select [OK] to discard all changes.

Load UEFI Defaults
Load UEFI default values for all options. The F9 key can be used for this operation.

Launch EFI Shell from filesystem device
Copy shellx64.efi to the root directory to launch EFI Shell.
