1. **Guide to SATA Hard Disks Installation**

1.1 **Serial ATA (SATA) Hard Disks Installation**

Intel chipset supports Serial ATA (SATA) hard disks with RAID functions, including RAID 0, RAID 1, RAID 5, RAID 10 and Intel Rapid Storage. Please read the RAID configurations in this guide carefully according to the Intel southbridge chipset that your motherboard adopts. You may install SATA hard disks on this motherboard for internal storage devices. This section will guide you how to create RAID on SATA ports.
2. **Guide to RAID Configurations**

2.1 **Introduction of RAID**

This motherboard adopts Intel southbridge chipset that integrates RAID controller supporting RAID 0 / RAID 1 / Intel Rapid Storage / RAID 10 / RAID 5 function with four independent Serial ATA (SATA) channels. This section will introduce the basic knowledge of RAID, and the guide to configure RAID 0 / RAID 1 / Intel Rapid Storage / RAID 10 / RAID 5 settings.

**RAID**

The term “RAID” stands for “Redundant Array of Independent Disks”, which is a method combining two or more hard disk drives into one logical unit. For optimal performance, please install identical drives of the same model and capacity when creating a RAID set.

**RAID 0 (Data Striping)**

RAID 0 is called data striping that optimizes two identical hard disk drives to read and write data in parallel, interleaved stacks. It will improve data access and storage since it will double the data transfer rate of a single disk alone while the two hard disks perform the same work as a single drive but at a sustained data transfer rate.

**WARNING!!**

Although RAID 0 function can improve the access performance, it does not provide any fault tolerance. Hot-Plug any HDDs of the RAID 0 Disk will cause data damage or data loss.

**RAID 1 (Data Mirroring)**

RAID 1 is called data mirroring that copies and maintains an identical image of data from one drive to a second drive. It provides data protection and increases fault tolerance to the entire system since the disk array management software will direct all applications to the surviving drive as it
**Intel Rapid Storage**

The Intel Rapid Storage technology supported allows you to create a RAID 0 and RAID 1 set using only two identical hard disk drives. The Intel Rapid Storage technology creates two partitions on each hard disk drive to create a virtual RAID 0 and RAID 1 sets. This technology also allows you to change the hard disk drive partition size without losing any data.

**RAID 10**

RAID 10 is a striped configuration with RAID 1 segments whose segments are RAID 1 arrays. This configuration has the same fault tolerance as RAID 1, and has the same overhead for fault-tolerance as mirroring alone. RAID 10 achieves high input / output rates by striping RAID 1 segments. In some instances, a RAID 10 configuration can sustain multiple simultaneous drive failure. A minimum of four hard disk drives is required for this setup.
RAID 5

RAID 5 stripes both data and parity information across three or more hard disk drives. Among the advantages of RAID 5 configuration include better HDD performance, fault tolerance, and higher storage capacity. The RAID 5 configuration is best suited for transaction processing, relational database applications, enterprise resource planning, and other business systems. Use a minimum of three identical hard disk drives for this setup.
2.2 RAID Configurations Precautions

1. Please use two new drives if you are creating a RAID 0 (striping) array for performance. It is recommended to use two SATA drives of the same size. If you use two drives of different sizes, the smaller capacity hard disk will be the base storage size for each drive. For example, if one hard disk has an 80GB storage capacity and the other hard disk has 60GB, the maximum storage capacity for the 80GB-drive becomes 60GB, and the total storage capacity for this RAID 0 set is 120GB.

2. You may use two new drives, or use an existing drive and a new drive to create a RAID 1 (mirroring) array for data protection (the new drive must be of the same size or larger than the existing drive). If you use two drives of different sizes, the smaller capacity hard disk will be the base storage size. For example, if one hard disk has an 80GB storage capacity and the other hard disk has 60GB, the maximum storage capacity for the RAID 1 set is 60GB.

3. Please verify the status of your hard disks before you set up your new RAID array.

WARNING!!
Please backup your data first before you create RAID functions. In the process you create RAID, the system will ask if you want to “Clear Disk Data” or not. It is recommended to select “Yes”, and then your future data building will operate under a clean environment.
2.3 Installing Windows® 8 / 8 64-bit / 7 / 7 64-bit With RAID Functions

If you want to install Windows® 8 / 8 64-bit / 7 / 7 64-bit OS on your SATA / SATA2 / SATA3 HDDs with RAID functions, please follow the procedures below.

STEP 1: Set up UEFI.
A. Enter UEFI SETUP UTILITY ➔ Advanced screen ➔ Storage Configuration.
B. Set “SATA Mode Selection” to [RAID] for Intel SATA2/SATA3 ports.

STEP 2: Set RAID configuration.
Please refer to p.8 - 16 of this document for instructions on how to set RAID configuration.

STEP 3: Use ASRock Easy RAID Installer
Follow this step only if you use a HDD larger than 2TB; otherwise, skip to STEP 4.
Easy RAID Installer can copy the RAID driver from a support CD to your USB storage device with just one simple click in UEFI setup. Please note that this feature is not available for all models.
A. Plug in your USB flash drive into a USB port.
B. Enter UEFI SETUP UTILITY ➔ Tool and highlight “Easy RAID Installer”. Press [Enter] to confirm the selection.
C. Follow the onscreen instruction to complete the process.

STEP 4: Install Windows® 8 / 8 64-bit / 7 / 7 64-bit OS on your system.
2.4 Setting the BIOS RAID Items
After installing the hard disk drives, please set the necessary RAID items in the BIOS before setting your RAID configuration. Boot your system, and press <F2> key to enter BIOS setup utility. Go to Advanced → Storage Configuration and set the option SATA Mode Selection to [RAID]. Press <F10> key to save your change before you exit BIOS setup.

2.5 Configuring a RAID array
You can configure a RAID array using either UEFI Setup Utility or Intel® RAID BIOS setup utility.

2.5.1 Configuring a RAID array Using UEFI Setup Utility
STEP 1:
For Windows® 8:
Go to UEFI SETUP UTILITY → Boot to set “Fast Boot” to [Ultra Fast].
or
Go to UEFI SETUP UTILITY → Boot to disable “CSM”.

For Windows® 7:
Go to UEFI SETUP UTILITY → Boot → CSM to set “Launch Storage OpROM policy” to [UEFI only].
STEP 2:
Enter **Intel(R) Rapid Storage Technology** in **Advanced** page.

STEP 3:
Select the option **Create RAID Volume** and press <Enter>.
STEP 4:
Key-in a a volume name and press <Enter>, or simply press <Enter> to accept the default name.

STEP 5:
Select your desired RAID Level and press <Enter>.
STEP 6:
Select the hard drives to be included in the RAID array and press <Enter>.

STEP 7:
Select a stripe size for the RAID array and press <Enter>.
STEP 8:
Select **Create Volume** and press <Enter> to start creating the RAID array.

If you want to delete a RAID volume, select the option **Delete** on the RAID volume info page and press <Enter>.
2.5.2 Configuring a RAID array Using Intel RAID BIOS

Reboot your computer. Wait until you see the RAID software prompting you to press <Ctrl+I>.

Press <Ctrl+I>. Then, the Intel RAID Utility - Create RAID Volume window appears.

In the Create Volume Menu, under Name item, please key-in a unique name with 1-16 letters for your RAID volume then press <Enter>.
Use the up or down arrow keys to select your desired **RAID Level**. You may select RAID 0 (Stripe), RAID 1 (Mirror), RAID 5 or RAID 10 for your RAID level. Press <Enter>, and then you can select **Strip Size**.

If you selected RAID 0 (Stripe), use the up or down keys to select the stripe size for your RAID 0 array then press <Enter>. The available values range from 8 KB to 128 KB. The default selection is 128 KB. The strip value should be chosen based on the planned drive usage.

- **8/16 KB** - low disk usage
- **64 KB** - typical disk usage
- **128 KB** - performance disk usage

After you set disk block size, press <Enter> to set disk **Capacity**.
After setting up **Capacity**, please press <Enter>.

Press <Enter> under the **Create Volume** item. The utility prompts a confirmation message as below.
Press <Y> to complete the setup of RAID.

After the completion, you will see the detailed information about the RAID that you set up.

Please note that you are only allowed to create one RAID partition at a time under BIOS RAID environment. If you want to create an extra RAID partition, please use the RAID utility under Windows environment to configure RAID functions after you install OS.

If you want to delete a RAID volume, please select the option **Delete RAID Volume**, press <Enter>, and then follow the instructions on the screen.
3. Installing Windows® on a HDD under 2TB in RAID mode

After the UEFI and RAID BIOS setup you may start installing Windows® 8 / 8 64-bit / 7 / 7 64-bit OS as usual.
4. Installing Windows® on a HDD larger than 2TB in RAID mode

Windows® 7 / 8 does not support HDD’s larger than 2TB. Please make sure to use Windows® 7 64-bit or Windows® 8 64-bit.

After the UEFI and RAID BIOS setup, please follow the steps below.

**STEP 1: Copy Intel® RAID drivers into a USB flash disk**
You can download the drivers from ASRock's website and unzip the files into a USB flash disk or copy the files from ASRock’s motherboard support CD. (Please copy the files under the following directory:
32 bit: ..\i386\Win7_Intel..
64-bit: ..\AMD64\Win7-64_Intel..

**STEP 2: Install Windows® 7 64-bit / 8 64-bit OS**
Press <F11> to launch boot menu at system POST and choose the item “UEFI:<Optical disk drive>“ to boot.
Start Windows® Installation. When you see “Where do you want to install Windows?” page, please click “Load Driver”.

Plug the USB flash disk into your USB port; select “Browse” to find the RAID driver. Then choose the directory you have copied in the first step.

Please keep the USB flash disk installed until the system's first reboot. Continue to install the OS by following the instructions.
If you install Windows® 8 64-bit / 7 64-bit on a large hard disk (ex. Disk volume > 2TB), it may take more time to boot into Windows® or install driver/utilities. If you encounter this problem, you will need to follow the instructions below to fix this problem.

Windows® 7 64-bit / 8 64-bit:
A. Please request the hotfix KB2505454 through this link:
   http://support.microsoft.com/kb/2505454/
B. After installing Windows® 7 64-bit / 8 64-bit, install the hotfix kb2505454.
   (This may take a long time; >30 mins.)
C. Reboot your system. (It may take about 5 minutes to reboot.)
D. Windows® will install this hotfix then reboot by itself.
E. Please start to install motherboard drivers and utilities.
